Advances in Cartography and Geographic Information Engineering Jiayao Wang, Fang Wu, 2021-07-30 This book reviews and summarizes the development and achievement in cartography and geographic information engineering in China over the past 60 years after the founding of the People's Republic of China. It comprehensively reflects cartography as a traditional discipline has almost the same long history with the world's first culture and has experienced extraordinary and great changes. The book consists of nineteen thematic chapters. Each chapter is in accordance with the unified directory structure: introduction, development process, major study achievements, problem and prospect, representative works, as well as a lot of references. It is useful as a reference both for scientists and technicians who are engaged in teaching, researching, and engineering of cartography and geographic information engineering.

A Program for the Solution of a Class of Geometric-analogy Intelligence-test Questions Thomas G. Evans, 1964 The novel organization of the program in terms of figure descriptions which are analyzed to find transformation rules and rule descriptions which are analyzed to find common generalizations of pairs of transformation rules has implications for the design of problem solving programs and for machine learning. These implications are discussed at some length and suggestions are made for work on pattern recognition and learning techniques based on ideas developed in the course of the present investigation.

Open and Inclusive Educational Practice in the Digital World Dirk Ifenthaler, Demetrios G. Sampson, Pedro Isaías, 2022-12-13 This book is about inclusivity and open education in the digital age. It reports the latest data on this topic from the 2021 Cognition and Exploratory Learning in the Digital Age (CELDA) conference. This annual conference focuses on challenges pertaining to the evolution of the learning process, the role of pedagogical approaches, and the progress of technological innovation in the context of the digital age. The material in this book represents the work of both researchers and practitioners in an effort to cover both technological and pedagogical issues in ground-breaking studies. The book covers a wide array of topics: examining the deployment of learning technologies, proposing pedagogical approaches and practices to address digital transformation, presenting case studies of specific technologies and contexts, and overall debating the contribution of learning technologies for the improvement of the learning process and the experience of students and for the development of key competences. It represents the best work reported during CELDA 2021, comprising expanded peer-reviewed chapters from best papers focusing on open education models, inclusive learning environments, and adaptive as well as personalized learning support.

History of Spatial Economic Theory C. Ponsard, 2012-12-06 The concept of space has always been a fundamental element in various branches of knowledge The concept often appears in the evolution of knowledge either as a basis of theory or as a factor in research It is associated more or less directly with all the history of scientific thought At the level of simple common sense the importance of the concept of space is only equaled by its lack of precision It was part of legend before becoming part of history To indicate the founding of Rome Romulus started by drawing the boundaries locating its landmarks in a discontinuous space after having cut the limits of a continuous space However neither geographical explorations nor mathematico logical speculations have ever completely removed the mystery from the concept of space For all its simple common sense its mystique remains intact The privileged position occupied by the concept of space in the history of science and the vagueness of its meaning in the current use of the term far from constituting a paradox are mutually explanatory Every concept of space is necessarily the result of an abstraction whether the process by which it is reached is through mathematics psychology biology or any other discipline At the level of common knowledge the space time concept is the base upon which are arranged individual experiences It is thus easy to understand how the concept of space can be understood only through an orderly arrangement of these experiences and their integration into a logical scheme
