Chemical Speciation of Organic and Inorganic components of Environmental and Biological Interest in Natural Fluids Francesco Crea, Alberto Pettignano, 2020-03-25 The International Union of Pure and Applied Chemistry IUPAC defines the term speciation as the distribution of an element amongst defined chemical species in a system while the process leading to quantitative estimation of the content of different species is called speciation analysis The chemical speciation of elements in natural waters and biological fluids is a key topic essential for discussing the chemical reactivity of constituents in these systems It is well understood that it is the chemical form of a metal or metalloids that determines its reactivity lifetime and fate in the environment Chemical speciation now involves various sectors of the sciences from chemistry to biology biochemistry and environmental sciences since as is well known the total concentration alone of an inorganic or organic component metal or ligand in a multicomponent natural system fresh water sea water biological fluids soil etc is insufficient for a comprehensive understand of its behavior in those contexts

The Use of Nanoparticles in the Diagnosis and Therapy of Infectious Disease in Animals Gerson Nakazato, Renata Katsuko Takayama Kobayashi, Santosh Dhakal, 2023-09-28 Recently nanoparticles have shown efficacy against antimicrobial activity including several microorganisms and those that are multidrug resistant Nanosensors represent an advance in the diagnosis of infectious diseases particularly those with zoonotic risk Different strategies using nanoparticles have been examined for both diagnosis and treatment of these diseases as well as prevention The optimization of detection methods and antimicrobial activity is a challenge in microbiology Advances using nanotechnology are an emerging alternative to solve some problems in the diagnosis and therapy of veterinary infectious diseases There are implications for the application of nanoparticles to shape interactions with the microorganism itself as well as influence the bioavailability biocompatibility and biodegradation of the system with low host toxicity The time of detection and its ability to target pathogens can be improved with nanotechnology
