

G16 SERIES UNITS

I - INTRODUCTION

The G16 is a medium high efficiency non-condensing furnace. It is available in six models with three input capacities; 50,000, 75,000, and 100,000 Btuh for either natural gas or LPG use. All G16 models are available in low NO_x versions to meet nitrogen oxide requirements in California. These special G16X models meet the California emissions standards of 40 nanograms per joule in the South Coast Air Quality Management District and the San Francisco Bay Area Air Quality Management District. G16X models are for use with natural gas only. These units may not be converted for LPG.

All G16 model units utilize the Lennox Duracurve heat exchanger. Flue products are removed by a factory installed induced draft blower which safely vents combustion products and operates only during the on cycle. A pressure switch prevents unit operation in case of blockage of the flue outlet.

Vertical venting is achieved through either dedicated or nondedicated venting systems. All G16 furnaces must be vented in compliance with all local codes and the National Fuel Gas Codes (ANSI-Z223.1). Canadian units must comply with CAN1 B149 Installation Code.

All G16 model units use hammock type oil impregnated wrap-around filter. Johnson Controls G90 electronic ignition system is used to light the pilot on each operating cycle (intermittent pilot). A protective circuit verifies pilot flame to allow main burner ignition. Both pilot and main burner are extinguished during the off cycle. If pilot fails to light, the main gas valve will not open. Pilot ignition is fully automatic and occurs only on demand for heat. Should a loss of flame occur, the main valve closes and pilot spark recurs within 0.8 second.
