

# PHOTOSYNTHESIS

= process where plants make organic food using radiant energy from sunlight.

## ENERGY ABSORPTION (trapping)

↳ main function of leaf = photosynthesis

→ plant cells containing chlorophyll pigment absorb radiant  $\text{e}^-$  from sun.

↳ green pigment in plants responsible for light absorption to provide  $\text{e}^-$  for photosynthesis.

\*  $\text{e}^-$ ,  $\text{H}_2\text{O}$  &  $\text{CO}_2$  combined to form sugars (glucose) & by-product  $\text{O}_2$  released into air.

## RAW MATERIALS

### CHLOROPHYLL

↳ embedded in membranes of thylakoids in the chloroplasts in plant cells

↳ membrane bound sacs which have chlorophyll molecules attached.

\* Iron required to make chlorophyll

\* Magnesium required to make & becomes incorporated into chlorophyll molecule

### → Structure of Chloroplast + function

\* contain thylakoids

\* granum(a) = thylakoids stacked together in piles

### → light-dependant phase of photosynthesis

occurs on thylakoid / grana membrane

→ chloroplast has dif enzymes which catalyse reactions of light-independent stage of photosynthesis

*Sea turtles in the Mediterranean : Distribution, threats and conservation priorities* Paolo Casale,2010      **International Science Between the World Wars** N. L. Englehardt,Michael S. Pritchard,2018-05-08 This book features articles by more than twenty experienced teachers of ethics who are committed to the idea that ethics can and should be taught virtually anywhere in the education curriculum They explore a variety of ways in which this might best be done Traditionally confined largely to programs in philosophy and religion the teaching of ethics has in recent decades spread across the curriculum education The contributors to this book discuss the rationale for supporting such efforts the variety of challenges these efforts face and the sorts of benefits faculty and students who participate in ethics across the curriculum endeavors can expect An overriding theme of this book is that the teaching of ethics should not be restricted to one or two courses in philosophy or religion programs but rather be addressed wherever relevant anywhere in the curriculum For example accredited engineering programs are expected to ensure that their students are introduced to the ethical dimensions of engineering This can involve consideration of ethical issues within particular areas of engineering e g civil mechanical electrical chemical as distinctive segments of certain courses e g those that focus on design problems or as a full semester course in ethics in engineering Similar approaches can be taken in nursing medicine law social work psychology accountancy management and so on That is some emphasis on ethics can be expected to be found in broad range of academic disciplines However many ethical issues require careful attention from the perspectives of several disciplines at once and in ways that require their joining hands Recognizing that adequately addressing many ethical issues may require the inclusion of perspectives from a variety of disciplines makes apparent the need for effective communication and reflection across disciplines not simply within them This in turn suggests that faculty and their students can benefit from special programs that are designed to include participants from a variety of disciplines Such programs will be a central feature of this book Although some differences might arise in how such issues might best be discussed across different parts of the curriculum these discussions might be joined in ways that help students faculty administrators and the wider public better appreciate their shared ethical ground      The End of the Certain World Nancy Thorndike Greenspan,2005 A social history and a history of science as well this intimate biography reveals scientist Max Born s struggle with morality politics war and obscurity      **Partners in Science** Robert E. Kohler,2020-02-22 Robert Kohler shows exactly how entrepreneurial academic scientists became intimate partners in science with the officers of the large foundations created by John D Rockefeller and Andrew Carnegie and in so doing tells a fascinating story of how the modern system of grant getting and grant giving evolved and how this funding process has changed the way laboratory

scientists make their careers and do their work This book is a rich historical tapestry of people institutions and scientific ideas It will stand for a long time as a source of precise and detailed information about an important aspect of the scientific enterprise It also contains many valuable lessons for the coming years John Ziman Times Higher Education Supplement
