DELAY MODELER DETAILS

The following pages rundown the details of the loop sampler, and the 15 other models of the Delay Modeler. As the pages describe, these models were created as the result of our in-depth studies of a dream collection of classic delay stomp boxes and rack units. We've included some historical information, as well as a sample setting for each model, to let you know how each of the units we studied made its mark on the world of guitar tone, and earned a spot on our modeling "hit list." The models of your Delay Modeler are designed to capture the sonic spirit of these classics, and bring it to you with the powerful new advantages of programmability and versatility – and 2.5 seconds of delay time! We hope you'll enjoy them.

Alternate Bypass for Delay Trail Remain

The Stomp Box Modelers include mechanically switching relays that route your signal directly from input jack to output jack and around all circuitry while in bypass.

There's also an alternate bypass mode available that keeps the DSP engaged while bypassed, so your delays can trail away when you kick the pedal off. If you want this Alternate Bypass mode, hold the first and third (from the left) stomp switches while plugging in the left/mono guitar input. (When the left/mono input is unplugged, your pedal is powered off.) Your pedal will remember to stay in this Alternate Bypass mode until you re-enable True Bypass.
