Performance-Based Assessment for 21st-Century Skills Todd Stanley,2021-09-03 Performance based assessments allow classroom teachers an alternative to traditional multiple choice tests We often use fill in the bubble assessments in education to determine the readiness of students However in the 21st century workplace these types of tests fail to truly prepare students How many times in the real world are we called upon to take a multiple choice test In the real world we are called upon to prove our merit through performance based assessments displaying our 21st century skills We should be preparing students for this in the classroom Performance Based Assessment for 21st Century Skills makes the argument that teachers should use performance based assessments in the classroom It guides the educator step by step to show how he or she can create performance based assessments for students including what they look like teaching students how to create them setting the proper classroom environment and how to evaluate them

Developing a 21st Century Global Library for Mathematics

Research National Research Council, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Planning a Global Library of the Mathematical Sciences, 2014-03-25 Like most areas of scholarship mathematics is a cumulative discipline new research is reliant on well organized and well curated literature Because of the precise definitions and structures within mathematics today's information technologies and machine learning tools provide an opportunity to further organize and enhance discoverability of the mathematics literature in new ways with the potential to significantly facilitate mathematics research and learning Opportunities exist to enhance discoverability directly via new technologies and also by using technology to capture important interactions between mathematicians and the literature for later sharing and reuse Developing a 21st Century Global Library for Mathematics Research discusses how information about what the mathematical literature contains can be formalized and made easier to express encode and explore Many of the tools necessary to make this information system a reality will require much more than indexing and will instead depend on community input paired with machine learning where mathematicians expertise can fill the gaps of automatization This report proposes the establishment of an organization the development of a set of platforms tools and services the deployment of an ongoing applied research program to complement the development work and the mobilization and coordination of the mathematical community to take the first steps toward these capabilities The report recommends building on the extensive work done by many dedicated individuals under the rubric of the World Digital Mathematical Library as well as many other community initiatives Developing a 21st Century Global Library for Mathematics envisions a combination of machine learning methods and community based editorial effort that makes a significantly greater portion of the information and knowledge in the global mathematical corpus available to researchers as linked open data through a central organizational entity referred to in the report as the Digital Mathematics Library This report describes how such a library might operate discussing development and research needs role in facilitating discover and interaction and establishing partnerships with publishers
