

- f. A minimum spacing of 1/4 inch shall be maintained between the telephone wiring and the low voltage wiring (zones, bell circuit, etc.). Do not route the LINE and SET wires in the same wiring channel with other wires.
- g. The "V+" terminal should not be used in UL installations.

3.6 Connecting the AC Transformer

CAUTION! Do not plug the transformer into the AC outlet before completing all other wiring.

- A. **U.S.A. only:** Remove the center screw from the AC wall outlet.
- B. Plug the transformer directly in - the Power LED of the control panel should illuminate.
- C. **U.S.A. only:** Use the screw removed in Step A above to secure the transformer to the AC outlet. Tighten the screw well.
- D. The distance of the transformer from the system should not exceed 150 ft using 18 AWG conductors.

For UL installations, do not connect to a receptacle controlled by a switch.

3.7 Installing an Optional X-10 Siren

(Not to be used in UL-listed systems.)

If you need a "wireless" external siren, you may install an X-10 siren module which is triggered by a signal transmitted via the built-in electrical wiring of the protected site. This siren can replace the regular external siren or complement it without laying out additional wires. Of course, such a siren can be used only in conjunction with an optional power-line interface module.

The X-10 siren is ready to function upon connection to an electrical power outlet, without re-programming the PowerMax+. You only have to set the HOUSE CODE and the UNIT CODE selectors on the X-10 siren as follows:

4. PROGRAMMING

4.1 INTRODUCTION

4.1.1 General Guidance

We recommend to program the PowerMax+ on the work bench before actual installation. Operating power may be obtained from the backup battery or from the AC power supply.

The installer's menu is accessible only to those who know the installer's 4-digit code, which is **9999** by factory default.

Note: Access to the installer menu, in PowerMax+ that has "User Permission" enabled (for example in UK) is accessible only at the end of the user menu. This option can be changed if necessary (see par. 4.4.35).

For PowerMax+ that has 2 installer codes (not applicable in UK), the default **INSTALLER** code is **8888** and the default **MASTER INSTALLER** code is **9999**.

The following actions can be done only by using the master installer code:

- Changing master installer code.
- Resetting the PowerMax+ parameters to the default parameters.
- Defining specific communication parameters, as detailed in a note in figure 4.5.

Obviously, you are expected to use this code only once for gaining initial access, and replace it with a secret code known only to yourself.

DE54671P

House Code: Set this selector to the letter that follows, by alphabetical order, the letter that you programmed as a house code for the protected premises. For example, if the programmed house code is "J", set the siren house code selector to "K".

Note: If the programmed house code letter is "P" (which is the last programmable letter), select "A" for the siren.

Unit Code: The siren will function only if you set the unit code selector to "1".

3.8 Connecting PowerMax+ to Computer

The control panel can be equipped with an optional RS232 module for serial data interchange with a local computer. If this module is not supplied, a special plastic cap blocks the niche designed to accommodate the module.

Figure 3.4 - Connecting the PowerMax+ to a Computer

3.9 Connecting PowerMax+ to GSM Modem

The GSM unit enables the PowerMax+ system to operate over a cellular network. For details regarding the GSM modem features and connections, refer to the GSM Modem Installation instructions.

You will mainly use 5 control pushbuttons during the entire programming process:

- to move one step forward in a menu.
- to move one step backward in a menu.
- to enter the relevant menu or confirm data.
- to move one level up in a menu.
- to return to the "OK TO EXIT" state.

The sounds you will hear while programming are:

- Single beep, heard whenever a key is pressed.
- Double beep, indicates automatic return to the normal operating mode (by timeout).
- Happy Melody (---), indicates successful completion of an operation.
- Sad Melody (—), indicates a wrong move or rejection.
