Instructions for operating the Kango Rotary Hammer Type 950

*Before making any attempt to connect
the hammer to an electric circuit,
please read these instructions carefully*

SUPPLY VOLTAGE AND CURRENT

Check that the electrical supply to the work site is in the tolerance of the hammer.

The circuit should be fixed at a value not less than that given for the rated current on the nameplate of the machine. The fitting of the plug must be checked out by an experienced electrician who will decide on the correct type to use in case of any other faulting in the circuit.

CONNECTING UP

This hammer is electrically wired with a 3 core cable in which the earth connection is grounded and a separate earth wire should not be connected.

Fit the 3 pin plug on the hammer lead into the 3 pin socket on the elect. adaptor lead supplied. The bare end of the adaptor lead should then be fixed with a plug suitable for the supply point. It is a 3 pin plug, it must go to the end of the adaptor lead and connections must be made in the earth pin.

The 3 pin plug on the hammer lead is 'interlock' primarily designed for use with the special 15 or 20 ft adaptor lead, which can be obtained from us on a charge basis.

When the 15 or 20 ft lead is used the ground of the lead should be connected to the terminal plug in form a weather-proof joint. The 15 or 20 ft adaptor lead may be connected to either another adaptor lead or the adaptor lead.

MAINTENANCE

All new hammers are delivered packed with grease and tools for 1000.

The quantity of the grease in the hammer is adequate for 100 hours and the hammer should then be re-greased by hand, or by Kango Grease or by compressed Kango oil for servicing.

It is found that tools are running dry at the head of the hammer. A little oil or grease should be applied to the tool at intervals when apart from this, no other lubrication is required between 100 hour service.
