Garvey,2016-04-19 Since the emerging discipline of engineering enterprise systems extends traditional systems engineering to develop webs of systems and systems of systems the engineering management and management science communities need new approaches for analyzing and managing risk in engineering enterprise systems **Advanced Risk Analysis in Engineering Enterprise Systems** **After Lisbon: National Parliaments in the European Union** Katrin Auel,Thomas Christiansen,2017-10-02 The role of national parliaments in EU matters has become an important subject in the debate over the democratic legitimacy of European Union decision making Strengthening parliamentary scrutiny and participation rights at both the domestic and the European level is often seen as an effective measure to address the perceived democratic deficit of the EU the reason for affording them a prominent place in the newly introduced Provisions on Democratic Principles of the Union in particular Article 12 TEU Whether this aim can be met however depends crucially on the degree to which and the manner in which national parliaments actually make use of their institutional rights This volume therefore aims at providing a comprehensive overview of the activities of national parliaments in the post Lisbon Treaty era This includes the classic scrutiny of EU legislation but also parliamentary involvement in EU foreign policy the use of new parliamentary participation rights of the Lisbon Treaty Early Warning System their role regarding the EU's response to the Eurozone crisis and the so far under researched role of parliamentary administrators in scrutiny processes This book was originally published as a special issue of West European Politics **A Decision Framework for Managing the Spirit Lake and Toutle River System at Mount St. Helens** National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Board on Environmental Change and Society,Division on Earth and Life Studies,Water Science and Technology Board,Board on Earth Sciences and Resources,Committee on Geological and Geotechnical Engineering,Committee on Long-Term Management of the Spirit Lake/Toutle River System in Southwest Washington,2018-03-29 The 1980 eruption of Mount St Helens in

southwest Washington State radically changed the physical and socio economic landscapes of the region The eruption destroyed the summit of the volcano sending large amounts of debris into the North Fork Toutle River and blocking the sole means of drainage from Spirit Lake 4 miles north of Mount St Helens As a result of the blockage rising lake levels could cause failure of the debris blockage putting the downstream population of approximately 50 000 at risk of catastrophic flooding and mud flows Further continued transport of sediment to the river from volcanic debris deposits surrounding the mountain reduces the flood carrying capacity of downstream river channels and leaves the population vulnerable to chronic flooding The legacy of the 1980 eruption and the prospect of future volcanic seismic and flood events mean that risk management in the Spirit Lake Toutle River system will be challenging for decades to come This report offers a decision framework to support the long term management of risks related to the Spirit Lake and Toutle River system in light of the different regional economic cultural and social priorities and the respective roles of federal tribal state and local authorities as well as other entities and groups in the region It also considers the history and adequacy of characterization monitoring and management associated with the Spirit Lake debris blockage and outflow tunnel other efforts to control transport of water and sediment from the 1980 and later eruptions and suggests additional information needed to support implementation of the recommended decision framework
