B. Monagan, 2003 Computing with Maple Francis Wright, 2001-09-27 Powerful flexible easy to use small wonder that the use of MAPLE continues to increase particularly since the latest releases of MAPLE The built in nature of its numerical and graphical facilities gives MAPLE a distinct advantage over traditional programming languages yet to date no textbook has used that advantage to introduce programming concepts Moreover few books based on

MAPLE's latest versions even exist. Computing with MAPLE presents general programming principles using MAPLE as a concrete example of a programming language. The author first addresses the basic MAPLE functions accessible for interactive use, then moves to actual programming, discussing all of the programming facilities that MAPLE provides, including control structures, data types, graphics, spreadsheets, text processing, and object-oriented programming. Reflecting MAPLE's primary function as a computational tool, the book's emphasis is on mathematical examples, and it includes a full chapter devoted to algebraic programming. Classroom tested since 1995, the material in Computing with MAPLE is particularly appropriate for an intermediate-level introductory course in programming for both mathematics and computing students. It includes numerous exercises and test questions with MAPLE worksheets, contact information, and supplementary material available on the Internet.

Orthogonal Polynomials and Special Functions Erik Koelink, Walter Van Assche, 2003-07-03. The set of lectures from the Summer School held in Leuven in 2002 provide an up-to-date account of recent developments in orthogonal polynomials and special functions, in particular for algorithms for computer algebra packages. Symbols in representation theory of Lie groups, enumeration, multivariable special functions, Dunkl operators, asymptotics via the Riemann-Hilbert method, exponential asymptotics, and the Stokes phenomenon. This volume aims at graduate students and post-docs working in the field of orthogonal polynomials and special functions, and in related fields interacting with orthogonal polynomials, such as combinatorics, computer algebra, asymptotics, representation theory, harmonic analysis, differential equations, physics. The lectures are self-contained, requiring only a basic knowledge of analysis and algebra, and each includes many exercises.
