Randomized Algorithms Rajeev Motwani, Prabhakar Raghavan, 1995-08-25 This book presents basic tools from probability theory used in algorithmic applications with concrete examples Design of Modern Communication Networks Christofer Larsson, 2014-03-05 Design of Modern Communication Networks focuses on methods and algorithms related to the design of communication networks using optimization graph theory probability theory and simulation techniques The book discusses the nature and complexity of the network design process then introduces theoretical concepts problems and solutions It demonstrates the design of network topology and traditional loss networks followed by uncontrolled packet networks flow controlled networks and multiservice networks Access network design is reviewed and the book concludes by considering the design of survivable reliable networks and various reliability concepts A toolbox of algorithms The book provides practical advice on implementing algorithms including the programming aspects of combinatorial algorithms Extensive solved problems and illustrations Wherever possible different solution methods are applied to the same examples to compare performance and verify precision and applicability Technology independent Solutions are applicable to a wide range of network design problems without relying on particular technologies **Experimental and Efficient Algorithms** Sotiris E. Nikolettseas, 2005-05-03 This book constitutes the refereed proceedings of the 4th International Workshop on Experimental and Efficient Algorithms WEA 2005 held in Santorini Island Greece in May 2005 The 47 revised full papers and 7 revised short papers presented together with extended abstracts of 3 invited talks were carefully reviewed and selected from 176 submissions The book is devoted to the design analysis implementation experimental evaluation and engineering of efficient algorithms Among the application areas addressed are most fields applying advanced algorithmic techniques such as combinatorial optimization approximation graph theory discrete mathematics scheduling searching sorting string matching coding networking data mining data analysis etc **Comprehensive Functional Verification** Bruce Wile, John Goss, Wolfgang Roesner, 2005-05-26 A key strength of this book is that it describes the entire verification cycle and details each stage The organization of the book follows the cycle demonstrating how functional verification engages all aspects of the overall design effort and how individual cycle stages relate to the larger design process Throughout the text the authors leverage their 35 plus years experience in functional verification providing examples and case studies and focusing on the skills methods and tools needed to complete each verification task Additionally the major vendors Mentor Graphics Cadence Design Systems Verisity and Synopsys have implemented key examples from the text and made these available on line so that the reader can test out the methods described in the text **Experimental and Efficient Algorithms**, 2005 DNA Based Computers III Harvey Rubin, David Harlan Wood, 1999 This volume presents the proceedings from the third DIMACS workshop on DNA Based Computers held at the University of Pennsylvania Philadelphia The workshop was part of the Special Year on Molecular Biology and the Special Year on DNA Computing The focus of this workshop was on the

multidisciplinary nature of the conference with emphasis on the interaction between biology and biochemistry on one hand and computer science and mathematics on the other Mathematics of Industrial Systems Rainer E. Burkard,2002
