The Hollander Manual ,1958 Post-Intensive Care Syndrome Jean-Charles Preiser,Margaret Herridge,Elie

Azoulay,2019-08-31 This book part of the European Society of Intensive Care Medicine textbook series provides detailed up to date information on the physical cognitive and psychological impairments that are frequently present following a stay in an intensive care unit and examines in depth the available preventive and therapeutic strategies including adapted rehabilitation programs Beyond acquainting readers with the multiple facets of post intensive care syndrome PICS the book aims to promote the effective follow up of patients thereby enhancing their ability to work and their functional autonomy and to identify risk factors for the development of PICS as a stimulus to beneficial organizational changes in intensive care departments The background to the book is the realization by healthcare providers that the quality of life of patients who have required a stay in an intensive care unit can be severely impaired or even become unacceptable All too often the diverse sequelae are overlooked by specialists of other disciplines Moreover families and caregivers are also at high risk of post traumatic stress disorder and depression The European Society of Intensive Care Medicine has developed the Lessons from the ICU series with the vision of providing focused and state of the art overviews of central topics in Intensive Care and optimal resources for clinicians working in Intensive Care This book written by renowned experts in the field will facilitate the transmission of key knowledge with significant clinical and financial benefits **The unfolded protein response in virus infections.** Shiu-Wan Chan,2015-03-05 Unfolded protein response UPR is a cellular adaptive response for restoring endoplasmic reticulum ER homeostasis in response to ER stress Perturbation of the UPR and failure to restore ER homeostasis inevitably leads to diseases It has now become evident that perturbation of the UPR is the cause of many important human diseases such as neurodegenerative diseases cystic fibrosis diabetes and cancer It has recently emerged that virus infections can trigger the UPR but the relationship between virus infections and host UPR is intriguing On one hand UPR is harmful to the virus and virus has developed means to subvert the UPR On the other hand virus exploits the host UPR to assist in its own infection gene expression establishment of persistence reactivation from latency and to evade the immune response When this delicate balance of virus host UPR interaction is broken down it may cause diseases This is particularly challenging for viruses that establish a chronic infection to maintain this balance Each virus interacts with the host UPR in a different way to suit their life style and how the virus interacts with the host UPR can define the characteristic of a particular virus infection Understanding how a particular virus interacts with the host UPR may pave the way to the design of a new class of anti viral that targets this particular pathway to skew the response towards anti virus This knowledge can also be translated into the clinics to help re design oncolytic virotherapy and gene therapy In this research topic we aimed to compile a collection of focused review articles original research articles commentary opinion hypothesis
