

Prison Labor and Private Sector Profits

The recent scandal in the Montblanc prison has, once again, brought to the surface an issue that has long been vigorously debated across the country. "Are prisoners being treated properly and, more specifically, is it ethical to engage prisoners in work that involves various harmful undertakings for the sake of private sector prison investors?" Regular Reps reports that there are over two dozen grand prison investors—gluttonous businessmen who are earning billions off prisoners' labor (Dono, Regular Reps).

The question of whether or not prisoners should work has long been off the agenda. Research once again proves what we already know that labor plays a significant positive impact on the rehabilitation of felons (Castor, Rehabilitating Felons in the New Century). Work is an important condition of living in a modern capitalized society, and approximately 77% of people, all around the world, are engaged in some sort of, more or less, regular work (Fancett, Cast Aways). Therefore, one aim of a society is to make sure that felons will be able to not only make up for their crimes and repent for their actions, but also to successfully reintegrate into a society and play a positive, active, and healthy role within their community.

Working means feeling needed. Working in a team means knowing you are a part of a bigger process; feeling you belong in a social group; that you have your own irreplaceable part in its functioning; and it awakens the desire to contribute to the common wellbeing. There is little debate about whether prisoners should be made to work or not—they most certainly need to be. Another fact in support of this opinion is that prisoners are being kept, and fed, by the money of taxpayers. It would only be fair to pay back to a particular society by learning to do useful actions (or engaging in work that a prisoner is already proficient at), thus making their contribution to the system of labor.

Nevertheless, few people might actually realize the truth about prison labor: it is not a society that harvests the crops of the prisoners' work. It is some two dozen businessmen [who have invested in the prison system](#) of the United States, in different states, and are now reaping their profits (Richards, Heads and Their Weight). When I personally found out about this fact, it made me feel sick. I can only imagine how it would make the prisoners themselves feel about their work, about the system of justice, and the few who apparently are only too willing to benefit from their labor. This most certainly is not fair, and a policy needs to be implemented by the government to break this cycle—otherwise, the prisoners will keep being exploited, and the taxpayers will continue to be fooled.

Introduction to Human-Computer Interaction Kasper Hornbæk, Per Ola Kristensson, Antti Oulasvirta, 2025-06-06 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence. It is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations. Aimed at undergraduate students in computer science design and engineering programs and master students in dedicated programs, this is the first comprehensive textbook for students of human computer interaction. While HCI is primarily a research driven field, the book focuses not only on scientific principles of interaction but also on the very concrete goal of designing better computing systems. The book revises and synthesizes topics that have been previously scattered across multiple books and papers, including design engineering, empirical methods, and technology. Although it covers emerging topics like VR and AI, the book places its emphasis on the more time enduring principles and methods. The book is open access and comes with associated materials for teachers and students available on the book's companion website.

Starting and Finishing the Paper Michael Walters, Ellen Diehl-Matto, 2006-08 Starting and Finishing the Paper: A How to Guide to Quality College Papers, Second Edition, is an excellent book for college students having difficulties with writing their college papers. It is a fun and step by step approach from start to finish. Starting and Finishing the Paper covers how to start a paper, how to write an introduction, how to handle different assignments, building the body of the paper, plagiarism, proper quoting, paragraph construction, transitions, and writing conclusions. It also contains many writing examples for students to follow. Starting and Finishing the Paper is short and to the point but not short on advice to the college student from two professors of writing who have taught for decades. Inside are many insightful comments written by the authors about the pitfalls students fall into and how to avoid them. It is not only written for students taking their first college composition course but also for students who need to write research papers and literary papers.

Writing for Biomedical Sciences Students Harry Witchel, 2020-02-14 This book will equip readers with all the skills needed to write convincing and polished assignments in biomedical sciences. The first part introduces the idea of writing for one's audience and enables readers to understand what is expected of them from different types of assignment. Part two provides detailed guidance on specific writing and presentation tasks with individual chapters on essays, lab reports, reflective writing, posters, and presentations. Parts three and four cover all of the key skills needed for successful writing in the biomedical sciences and help students develop a critical eye when selecting and researching information and create clear, well structured assignments. Chapters contain top tips, examples, and helpful summaries of key points, and three annotated sample assignments are provided in an appendix. This is an essential companion to any student studying biomedical science or related disciplines such as physiology, biomedical engineering, pharmacy, medicine, and dentistry.

Designing Instructional Systems A J Romiszowski, 2016-01-08 This book deals with large scale or macro level instructional design which is referred to by other authors variously as curriculum development, course design, training system design, or instructional systems design. The emphasis throughout the book is on the application of a systems approach which implies both a way of thinking about the problem and a methodology for seeking and developing solutions. Thus the approach of the book is problem oriented. The successful problem solver requires more than a technique or procedure. He requires experience of similar problems, some general principles that he can apply to the class of problems, and a great deal of creativity to develop an optimal method of solving each problem. This book brings together the theories and practical experience that have been built up by instructional technologists over the last two decades, the techniques that are currently most used for the analysis of problems in education and for their solution, and a range of new ideas specially developed by the author to encourage the creative element so often missing from educational materials. This book is intended for anyone involved in instructional design. It is designed on a grid structure to facilitate the reader's choice of chapters. Those who wish to gain a general overview may concentrate on the chapters at the theory base and analysis levels. Those more practically concerned with course design will find much of use in the synthesis and evaluation levels. Those who wish simply to discover what's new in this book and its treatment of instructional design will find what they are seeking principally in the analysis and evaluation levels.

Rethinking Research Methods in an Age of Digital Journalism Michael Karlsson, Helle Sjøvaag, 2018-10-18 The digital infrastructure of media production, dissemination, and consumption is becoming increasingly complex, presenting the challenge of how we should research the digital journalism environment. Digital journalism takes many forms; we therefore need to revise, improve, adjust, and even invent methods to understand emerging forms of journalism. In this book, scholars at the forefront of methodological innovations in digital journalism research share their insights on how to collect, process, and analyse the diverse expressions of digital journalism, including online news, search results, hyperlinks, and social media posts. As digital journalism content often comes in the form of big data, many of these new approaches depart from the traditional methods used in media research in significant ways. As we move towards new ways of understanding digital journalism, the methods developed for such purposes also need to be grounded in scientific rigour. This book aims to share some of the emerging processes by which these methods, tools, and approaches are designed, implemented,

and validated As such this book not only constitutes a benchmark for thinking about research methods in digital journalism it also provides an entry point for graduate students and seasoned scholars aiming to do research on digital journalism This book was originally published as a special issue of Digital Journalism **ECRM2015-Proceedings of the 14th European Conference on Research Methods 2015** Dr Vincent Cassar, Dr Frank Bezzina, 2015-06-01 Complete proceedings of the 14th European Conference on Research Methodology for Business and Management Studies Valletta Malta Published by Academic Conferences and Publishing International *DHEW Publication No. (OE). ,1972 Understanding and Evaluating Research* Sue L.
