Building Embedded Linux Systems, Karim

Yaghmour, Jon Masters, Gilad Ben-Yossef, Philippe Gerum, 2008-08-15. There's a great deal of excitement surrounding the use of Linux in embedded systems for everything from cell phones to car ABS systems and water filtration plants, but not a lot of practical information. *Building Embedded Linux Systems* offers an in-depth, hard-core guide to putting together embedded systems based on Linux. Updated for the latest version of the Linux kernel, this new edition gives you the basics of building embedded Linux systems along with the configuration setup and use of more than 40 different open-source and free software packages in common use. The book also looks at the strengths and weaknesses of using Linux in an embedded system, plus a discussion of licensing issues and an introduction to real-time with a discussion of real-time options for Linux. This indispensable book features arcane and previously undocumented procedures for building your own GNU development toolchain, using an efficient embedded development framework, selecting, configuring, building, and installing a target-specific kernel, creating a complete target root filesystem, setting up, manipulating, and using solid-state storage devices, installing and configuring a bootloader for the target, cross-compiling a slew of utilities and packages, debugging your embedded system using a plethora of tools and techniques, using the uClibc, BusyBox, U-Boot, OpenSSH, tftpd, tftp, strace, and gdb packages. By presenting how to build the operating system components from pristine sources and how to find more documentation or help, *Building Embedded Linux Systems* greatly simplifies the task of keeping complete control over your embedded operating system.

Mobile Multimedia Processing, Xiaoyi Jiang, Matthew Y. Ma, Chang Wen Chen, 2010-03-25. The portable device and mobile phone market has witnessed rapid growth in the last few years with the emergence of several revolutionary products such as mobile TV, converging iPhone and digital cameras that combine music, phone, and video functionalities into one device. The proliferation of this market has further benefited from the competition in software and applications for smart phones such as Google's Android operating system and Apple's iPhone App Store, stimulating tens of thousands of mobile applications that are made available by individual and enterprise developers. Whereas the mobile device has become ubiquitous in people's daily life, not only as a cellular phone but also as a media player, a mobile computing device, and a personal assistant, it is particularly important to address challenges timely in applying advanced pattern recognition, signal information, and multimedia processing techniques and new emerging networking technologies to such mobile systems. The primary objective of this book is to foster interdisciplinary discussions and research in mobile multimedia processing techniques, applications, and systems as well as to provide stimulus to researchers on pushing the frontier of emerging new technologies and applications. One

attempt on such discussions was the organization of the First International Workshop of Mobile Multimedia Processing WMMP 2008 held in Tampa Florida USA on December 7 2008 About 30 papers were submitted from 10 countries across the USA Asia and Europe
