

## How to Properly Mount the Cutting Blade to the Blade Holder

1

To remove the blade holder from the vibrating head unit, loosen the small screw on top of the blade holder with the included Allen wrench.

**Always remove the blade holder BEFORE removing or inserting the buffer tray.**

2

Slide the blade holder off the axial bar.

3

Remove the old cutting blade.

**Dispose of blade safely into a sharps container.**

4

Soak the blade holder in the acetone bath for 5 minutes. Wipe off any residual glue on the blade holder using a paper towel. It is critical to ensure all glue residue is removed before attaching a new blade.

**DISCLAIMER:** Please only use acetone to clean the blade holder and specimen tube.

**Neuroanatomical Research Techniques** Richard T. Robertson, 2013-10-22 Neuroanatomical Research Techniques discusses developments in major neuroanatomical research techniques The book is organized into four parts Part I deals generally with the preparation and study of brain tissue It includes a chapter on the microscope discussing optical magnification limitations of microscopy and optical contrasting methods Other chapters summarize basic techniques for tissue preparation and sectioning present guidelines for a number of standard but essential staining procedures and present sophisticated and contemporary computer techniques that are proving to be invaluable as neuroanatomy evolves from a qualitative to a quantitative discipline Part II deals with techniques often used for the study of normal tissue These include the Golgi method fluorescence histochemistry techniques for staining single neurons and the use of the electron microscope Part III presents techniques for studying intrinsic connections of the nervous system These include techniques for silver impregnation of degenerating fibers autoradiographic technique for studying axonal projections and somatopetal movement of horseradish peroxidase as a tool for studying connections and neuron morphology Part IV discusses the interpretation of results from neuroanatomical research techniques and presents examples of the applications of neuroanatomical methods to major problems in physiological psychology

**Environments** Pedro M. Costa, 2017-09-27 The Handbook of Histopathological Practices in Aquatic Environments Guide to Histology for Environmental Toxicology offers readers in aquatic biology and other water based environmental sciences a comprehensive resource on histopathology which is a key tool in the growing field of ecotoxicology This work brings together the necessary knowledge from sample preparation to trait identification and scoring and data treatment Furthermore with examples from several groups of organisms from worms to fish these practices can be applied across a wide array of aquatic ecosystems This book provides a step by step approach to solving the questions researchers encounter in aquatic biology and related fields Offers examples from a broad range of aquatic organisms replacing sparse dispersed and often aged literature Covers a variety of organisms including hard to find non commercial and non model species Provides an in depth understanding of how and why techniques are used as opposed to just a list of procedures Combines in a single work everything from sample handling to scoring

**Neuroanatomical Techniques** N.J. Strausfeld, T.A. Miller, 2012-12-06 Most neurobiological research is performed on vertebrates and it is only natural that most texts describing neuroanatomical methods refer almost exclusively to this Phylum Nevertheless in recent years insects have been studied intensively and are

becoming even more popular in some areas of research They have advantages over vertebrates with respect to studying genetics of neuronal development and with respect to studying many aspects of integration by uniquely identifiable nerve cells Insect central nervous system is characterized by its compactness and the rather large number of nerve cells in a structure so small But despite their size parts of the insect eNS bear structural comparisons with parts of vertebrate eNS This applies particularly to the organization of the thoracic ganglia and spinal cord to the insect and vertebrate visual systems and possibly to parts of the olfactory neuropils The neurons that make up these areas in insects are often large enough to be impaled by microelectrodes and can be injected with dyes Added to advantages of using a small eNS into which the sensory periphery is precisely mapped are the many aspects of insect behaviour whose components can be quantized and which may find both structural and functional correlates within clearly defined regions of neuropil Together these various features make the insect eNS a rewarding object for study This volume is the first of two that describe both classic and recent methods for neuroanatomical research on insect eNS
