in cognition including language number space faces reading memory and attention and represent the wealth of approaches and techniques that can be used to shed light on the nature of cognitive development in brain and mind These include cross species comparisons studies of development under experiential deprivation or genetic differences classical developmental experimentation and imaging techniques such as NIRS and fMRI which have recently been applied to developmental questions The combination of solid theorizing together with a broad range of approaches allows a critical but constructive look at the latest findings in the field relevant to answering enduring questions about cognition its development and its realization in the developing brain
