

## Marine Propulsion Diesel Engines:

This outstanding eight cylinder 13.00 litre engine offers the greatest degree of efficiency, durability and refinement. The specific fuel consumption rate of the engine when directly coupled to the dynamometer is the remarkably low value of 0.329 kg per b.h.p. hour which represents an overall thermal efficiency of over 40%. The engine is designed for use with a fresh water cooled circuit heat exchanger or sea water system. Coolant is circulated at high rate by a centrifugal pump and temperature is automatically controlled at all loads and speeds from idle to maximum output. The novel exhaust system, which requires avoidance of interference of one cylinder to another, is conveniently arranged upward pointing with the inlet manifold located below it.
