Soumyajit Mukherjee,2021-03-22 This book helps a novice to explore the terrain independently Geoscience fieldwork with a focus on structural geology and tectonics has become more important in the last few years from both academic and industrial perspectives This book also works as a resource material for batches of students or geological survey professional undergoing training as parts of their course curriculum Industry persons on the other hand can get a first hand idea about what to expect in the field in case no academic person is available with the team This book focused on structural geology and tectonics compiles for the very first time terrains from several regions of the globe **Magmatic Rifting and Active**

Volcanism T.J. Wright,A. Ayele,D.J. Ferguson,T. Kidane,C. Vye-Brown,2016-09-06 A major rifting episode began in the Afar region of northern Ethiopia in September 2005 Over a ten day period c 2 5 km³ of magma were intruded along a 60 km long dyke separating the Arabian and Nubian plates Over the next five years a further 13 dyke intrusions caused continued extension eruptions and seismicity This activity led to a renewed international focus on the role of magmatism in rifting with major international collaborative projects working in Afar and Ethiopia to study the ongoing activity and to place it in a broader context This book brings together articles that explore the role of magmatism in rifting from the initiation of continental break up through to full seafloor spreading We also explore the hazards related to rifting and the associated volcanism This work has implications for our understanding of how continents break up and the associated distribution of resources in rift basins and continental margins

Myanmar A.J. Barber,Khin Zaw,M.J. Crow,2017-11-20 Myanmar is a country vastly rich in gold silver base metals tin tungsten gems and hydrocarbons and is one of the last exploration frontiers remaining in the world Tectonically Myanmar lies at the eastern end of the Himalayan Mountain Chain and over the last 50 Ma has been profoundly affected by the collision between India and Eurasia which is still ongoing with frequent destructive earthquakes Recent advances have been made in understanding the results of the collision through the study of geochronology seismicity stratigraphy and structure The development of a systematic mapping programme has been restricted by problems of access due to limited infrastructure and armed insurgencies meaning that large areas of the

country have not been explored adequately Recent political changes and reforms with reconciliations with various ethnic groups however will permit access to large areas in Kayah Kayah Shan and Kachin States enabling further research and exploration in new crustal blocks and terranes In this Memoir a group of Myanmar and international geologists have combined to include all that is currently known about the geology of Myanmar its mineral and energy resources and its tectonic development *Developments in the Lithospheric Evolution of the Indo-Pacific Region* J.
