Vermaas, Stéphane Vial, 2018-03-02 This volume presents 25 essays on the philosophy of design With contributions originating from philosophy and design research and from product design to architecture it gives a rich spectrum of state of the art research and brings together studies on philosophical topics in which design plays a key role and design research to which philosophy contributes Coverage zooms in on specific and more well known design disciplines but also includes less studied disciplines such as graphic design interior architecture and exhibition design In addition contributors take up traditional philosophical issues such as epistemology politics phenomenology and philosophy of science Some essays cover philosophical issues that emerge in design for instance what design can do in addressing societal problems while other essays analyze main stream philosophical issues in which design is part of the argument as for instance abduction and aesthetics Readers will discover new research with insightful analyses of design research design thinking and the specificity of design Overall this comprehensive overview of an emerging topic in philosophy will be of great interest to researchers and students The Nature of Order, Book Two: The Process of Creating Life Christopher

Alexander,2020-03-30 Scientifically this is perhaps the most exciting of the four books How do beautiful creations come into being Nature can make an infinite number of human faces each one unique each one beautiful The same is true for daffodils streams and stars But man made creations especially the towns and buildings of the 20th century have only occasionally been really good more often mediocre and in the last 50 years have most often been deadly What is the reason for the difference It hinges on the deep nature of the processes we use Merely understanding the geometry of beautiful and living form the topic of Book 1 is not enough to help us create such a living geometry In the 20th century our society was locked into deadly processes which created our current built environment process that most people were not really aware of and did not question Despite their best efforts and intentions architects and planners working within these processes could not achieve a living built environment Life and beauty in the built world arise only from processes which allow living structure to unfold The secret lies in knowing as nature does what must happen in what order what sequence of events allows a living form to unfold successfully Here in Book 2 Alexander puts forward a fully developed theory of living process He defines conditions for a process to be living that is capable of generating living structure He shows how such processes work and how they may be created At the core of the new theory is the theory of structure preserving transformations This concept new in scientific thinking is based on the concept of wholeness defined in Book 1 A structure preserving transformation is one which preserves extends and enhances the wholeness of a system Structure preserving transformations provide the means for any step by step process social biological architectural or technical to reach configurations which are most profound most capable of supporting life The process of creation whether in the formation of a single object or in the piecemeal aggregation of a town requires this sort of generative process a careful and deliberate sequence of steps in which each step creates the context for the next one and each next wholeness is derived from the previous wholeness Our billions of beautiful and unique human faces come from one class of sequences Driven by these sequences an initial cell differentiates again and again until beautiful and complex human beings emerge infinitely various always harmonious Making changes in society so that streets buildings rooms gardens and towns may be generated by hundreds of such sequences requires massive transformations This book is the first blueprint of those transformations

The Politics of the Artificial Victor Margolin, 2018-01-11 Emerging from the world of commercial art and product styling design has now become completely integrated into human life Its marks are all around us from the chairs we sit on to the Web sites on our computer screens One of the pioneers of design studies and still one of its most distinguished practitioners Victor Margolin here offers a timely meditation on design and its study at the turn of the millennium and charts new directions for the future development of both fields Divided into sections on the practice and study of design the essays in The Politics of the Artificial cover such topics as design history design research design as a political tool sustainable design and the problems of design's relation to advanced technologies Margolin also examines the work of key practitioners such as the matrix designer Ken Isaacs Throughout the book Margolin demonstrates the underlying connections between the many ways of reflecting on and practicing design He argues for the creation of an international interdisciplinary field of design research and proposes a new ethical agenda for

designers and researchers that encompasses the responsibility to users the problems of sustainability and the complicated questions of how to set boundaries for applying advanced technology to solve the problems of human life Opinionated and erudite Victor Margolin's *The Politics of the Artificial* breaks fresh ground in its call for a new approach to design research and practice Designers engineers architects anthropologists sociologists and historians will all benefit from its insights

The Nature of Order, Book Three: A Vision of A Living World Christopher Alexander, 2020-03-30 Christopher Alexander's series of ground breaking books including *A Pattern Language* and *The Timeless Way of Building* have pointed to fundamental truths of the way we build revealing what gives life and beauty and true functionality to our buildings and towns Now in *The Nature of Order* Alexander explores the properties of life itself highlighting a set of well defined structures present in all order and in all life from micro organisms and mountain ranges to good houses and vibrant communities From a practical point of view *A Vision of a Living World* is the most compelling of the four books Hundreds of photographs and plans of new buildings that have living structure and the processes which gave them life demonstrate for the first time what the concept of living structure can

mean in buildings of our time and of the future The really good building The really good space Places that reach an archetypal level of human experience reaching across centuries across continents across cultures across technology across building materials and climates They connect us to ourselves They connect us to our feelings What is more as we study them we realize that they all share a similar geometry How are they made The practical task of making beauty is the principal subject of this volume Hundreds of examples of buildings and places are shown New forms for large buildings public spaces communities neighborhoods lead to discussions about equally important small scale of detail and ornament and colour Many of the examples are built by Alexander and his colleagues other buildings explored take us around the world and through time With these examples lay people architects builders artists and students are able to make this new framework real for themselves understand how it works and understand its significance The book is a feast for the eyes and mind and heart Places created by living process Book 2 have living structure Book 1 and they connect us to our essence as people Book 4 The seven hundred pictures of Alexander's buildings and works of art shown in this book demonstrate in detail what he means Taken as a whole the four books create a sweeping new conception of the nature of things which is both objective and structural hence part of science and also personal in that it shows how and why things have the power to touch the human heart A step has been taken through which these two domains the domain of geometrical structure and the feeling it creates kept separate during four centuries of scientific thought from 1600 to 2000 have finally been united The Nature of Order constitutes the backbone of Building Beauty Ecologic Design Construction Process an initiative aimed at radically reforming architecture education with the emphasis of making as a way to access a transformative vision of the world The 15 fundamental properties of life guide our work and have given us much more than a set of solutions The Nature of Order has given us the framework in which we can search and build up our own solutions In order to be authentically sustainable buildings and places have to be cared for and loved over generations Beautiful buildings and places are more likely to be loved and they become more beautiful and loved through the attention given to them over time Beauty is therefore not a luxury or an option it includes and transcends technological innovation and is a necessary requirement for a truly sustainable culture
