V. Lewis, P. A. Cassell, T. J. Fricke, 1975 **A Methodology for Processing Raw LIDAR Data to Support Urban Flood Modelling Framework** Ahmad Fikri Bin Abdullah, 2020-10-29 The consequences of recent floods and flash floods in many parts of the world have been devastating One way to improving flood management practice is to invest in data collection and modelling activities which enable an understanding of the functioning of a system and the selection of optimal mitigation measures A Digital Terrain Model DTM provides the most essential information for flood managers Light Detection and Ranging LiDAR surveys which enable the capture of spot heights at a spacing of 0.5m to 5m with a horizontal

accuracy of 0.3m and a vertical accuracy of 0.15m can be used to develop high accuracy DTM but needs careful processing before using it for any application. This book presents the augmentation of an existing Progressive Morphological filtering algorithm for processing raw LiDAR data to support a 1D/2D urban flood modelling framework. The key characteristics of this improved algorithm are: 1) the ability to deal with different kinds of buildings; 2) the ability to detect elevated road/rail lines and represent them in accordance to the reality; 3) the ability to deal with bridges and riverbanks; and 4) the ability to recover curbs and the use of appropriated roughness coefficient of Manning's value to represent close to earth vegetation e.g. grass and small bush.

Green Stormwater Infrastructure for Sustainable Urban and Rural Development Luis A. Sañudo-Fontaneda, William F. Hunt, 2021-04-22. Green Stormwater Infrastructure for Sustainable Urban and Rural Development offers some of the latest international scientific and practitioner findings around the adaptation of urban/rural and transportation infrastructures to climate change by sustainable water management. This book addresses the main gaps in the up-to-date literature and provides the reader with a holistic view ranging from a strategic and multiscale planning implementation and decision making angle down to the engineering details for the design, construction, operation and maintenance of green stormwater techniques such as sustainable drainage systems (SuDS) and stormwater control measures (SCMs). This book is particularly recommended for a wide audience of readers such as academics, researchers and students in the fields of architecture and landscaping, engineering, environmental and natural sciences, social and physical geography and urban and territorial planning. This book is also a resource for practitioners and professionals developing their work in architecture studios, engineering companies, local and regional authorities, water and environmental industries, infrastructure maintenance, regulators, planners, developers and legislators.

Handbook of Catchment Management Robert C. Ferrier, Alan Jenkins, 2009-09-11. This book addresses the fundamental requirement for an interdisciplinary catchment based approach to managing and protecting water resources that crucially includes an understanding of land use and its management. In this approach, the hydrological cycle links mountains to the sea and ecosystems in rivers, groundwaters, lakes, wetlands, estuaries and coasts forming an essential continuum directly influenced by human activity. The book provides a synthesis of current and future thinking in catchment management and shows how the specific problems that arise in water use policy can be addressed within the context of an integrated approach to management. The book is written for advanced students, researchers, fellow academics and water sector professionals such as planners and regulators. The intention is to highlight examples and case studies that have resonance not only within natural sciences and engineering but with academics in other fields such as socio-economics, law and policy.
