Contemporary Communication Systems Using MATLAB

John G. Proakis, Masoud Salehi, 2000 This supplement to any standard communication systems text is one of the first books to successfully integrate the use of MATLAB in the study of communication systems concepts and problems It has been developed for instructors and students who wish to make use of MATLAB as an integral part of their study The former will find the means by which to use MATLAB as a powerful tool to motivate students and illustrate essential theory without having to customize the applications themselves the latter will find relevant problems quickly and easily The book includes numerous MATLAB based simulations and examples of communication systems while providing a good balance of theory and hands on computer experience This Updated Printing revises the book and MATLAB files available for downloading from the Brooks Cole Bookware Companion Resource Center Web Site to MATLAB V5

David Salomon, 2013-03-20 In 1829 Louis Braille a young organist in a Paris church blind since age 3 invented the well known code for the blind still in common use today all over the world and named after him Braille himself modified his code in 1834 and there have been several modifications since However the basic design of this code where each character is represented by a group of 3 x 2 dots has remained intact The dots are embossed on thick paper and each can be raised or flat i e present or absent Each dot is therefore equivalent to one bit of information As a result the Braille code Figure 1 is a 6 bit code and can therefore represent 64 symbols the code of six flat dots indicates a blank space Braille's followers extended the capabilities of his code in several ways One important extension is contractions These are letters that when they stand alone mean words For example the letter b standing alone or with punctuation means the word but the letter e standing alone means every and p means people Another extension is short form words These are combinations of two or more codes that mean an entire word short form words may contain contractions For example ab means about rcv means receive and the mvs means themselves The the in parentheses is a contraction dots 2 3 4 6 Figure 2 shows some examples of these special codes
