been understood as one of the key factors affecting the rise of great powers Yet when these dynamics have been studied the  
focus tends to be on the moment of innovation where was a key technology invented In this book Jeffrey Ding argues that it s  
not innovation but rather the way a technology diffuses through a country that determines whether and how it strengthens  
the state The result is a new way to consider how technology and power have played out over history and what this might  
mean for the future To make this case Ding first outlines a new theory that centers on not the creation of new technology but  
its spread across society looking specifically at the role of education in promoting technological skill and literacy He then  
shows how this approach changes our understanding of three canonical cases Britian s rise during the first industrial

revolution America's rise during the second industrial revolution and Japan's rise and decline during the third industrial revolution He then expands out to consider what this theory would predict for the coming competition between the United States and China in an AI driven fourth industrial revolution The result is an ambitious wide ranging take on how technology shapes world order Provided by publisher Education Year Book ,1993 *Industrial Arts TCT Preparation Guide* Robert A.
