Finance for Normal People Meir Statman, 2017 Finance for Normal People teaches behavioral finance to people like you and me: normal people, neither rational nor irrational. We are consumers, savers, investors, and managers: corporate managers, money managers, financial advisers, and all other financial professionals. The book guides us to know our wants, including hope for riches, protection from poverty, caring for family, sincere social responsibility, and high social status. It teaches financial facts and human behavior, including making cognitive and emotional shortcuts and avoiding cognitive and emotional errors such as overconfidence, hindsight, exaggerated fear, and unrealistic hope. And it guides us to banish ignorance, gain knowledge, and increase the ratio of smart to foolish behavior on our way to what we want. These lessons of behavioral finance draw on what we know about us, normal people, including our wants, cognition, and emotions. And they draw on the roles of these factors in saving and spending, portfolio construction, returns we can expect from our investments, and whether we can hope to beat the market. Meir Statman, a founder of behavioral finance, draws on his extensive research and the research of many others to build a unified structure of behavioral finance. Its foundation blocks include normal behavior, behavioral portfolio theory, behavioral life cycle theory, behavioral asset pricing theory, and behavioral market efficiency.

Artificial Intelligence for Drug Development, Precision Medicine, and Healthcare Mark Chang, 2020-05-12 Artificial Intelligence for Drug Development, Precision Medicine, and Healthcare covers exciting developments at the intersection of computer science and statistics. While much of machine learning is statistics-based achievements in deep learning for image and language processing rely on computer science's use of big data. Aimed at those with a statistical background who want to use their strengths in pursuing AI research, the book covers broad AI topics in drug development, precision medicine, and healthcare. Elaborates on supervised, unsupervised, reinforcement, and evolutionary learning methods. Introduces the similarity principle and related AI methods for both big and small data problems. Offers a balance of statistical and algorithm-based approaches to AI. Provides examples and real-world applications with hands-on R code. Suggests the path forward for AI in medicine and artificial general intelligence. As well as covering the history of AI and the innovative ideas, methodologies, and software implementation of the field, the book offers a comprehensive review of AI.
