Statistical Methods Cheryl Ann Willard, 2020-02-27 *Statistical Methods An Introduction to Basic Statistical Concepts and Analysis* Second Edition is a textbook designed for students with no prior training in statistics. It provides a solid background of the core statistical concepts taught in most introductory statistics textbooks. Mathematical proofs are deemphasized in favor of careful explanations of statistical constructs. The text begins with coverage of descriptive statistics such as measures of central tendency and variability, then moves on to inferential statistics. Transitional chapters on z scores, probability, and sampling distributions pave the way to understanding the logic of hypothesis testing and the inferential tests that follow. Hypothesis testing is taught through a four-step process. These same four steps are used throughout the text for the other statistical tests presented, including t tests, one and two-way ANOVAs, chi-square, and correlation. A chapter on nonparametric tests is also provided as an alternative when the requirements cannot be met for parametric tests. Because the same logical framework and sequential steps are used throughout the text, a consistency is provided that allows students to gradually master the concepts. Their learning is enhanced further with the inclusion of thought questions and practice problems integrated throughout the chapters. New to the second edition: Chapters on factorial analysis of variance and nonparametric techniques for all data. Additional and updated chapter exercises for students to test and demonstrate their learning. Full instructor resources: test bank questions, Powerpoint slides, and an Instructor Manual.

Microsoft Excel 2000 Core Certification Nita Hewitt Rutkosky, 2000 **Actuaries' Survival Guide** Fred Szabo, 2004-05-04 This unique book is a guide for students and graduates of mathematics, statistics, economics, finance, and other number-based disciplines contemplating a career in actuarial science. Given the comprehensive range of the cases that are analyzed in the book, the *Actuaries' Survival Guide* can serve as a companion to existing study material for all courses designed to prepare students for actuarial examinations. Based on the curricula and examinations of the Society of Actuaries (SOA) and the Casualty Actuarial Society (CAS), it presents an overview of career options and details on employment in different industries. It provides a link between theory and practice, helps readers gain the qualitative and quantitative skills and knowledge required to succeed in actuarial exams, and includes insights from over 50 actuaries and actuarial students. Written by Fred Szabo, who has directed the actuarial co-op program at Concordia University for over ten years.
