Cobb, 2015-01-27 Streamline project workflow with expert agile implementation The Project Management Profession is beginning to go through rapid and profound transformation due to the widespread adoption of agile methodologies Those

changes are likely to dramatically change the role of project managers in many environments as we have known them and raise the bar for the entire project management profession however we are in the early stages of that transformation and there is a lot of confusion about the impact it has on project managers There are many stereotypes and misconceptions that exist about both Agile and traditional plan driven project management Agile and traditional project management principles and practices are treated as separate and independent domains of knowledge with little or no integration between the two and sometimes seen as in conflict with each other Agile and Waterfall are thought of as two binary mutually exclusive choices and companies sometimes try to force fit their business and projects to one of those extremes when the right solution is to fit the approach to the project It s no wonder that many Project Managers might be confused by all of this This book will help project managers unravel a lot of the confusion that exists develop a totally new perspective to see Agile and traditional plan driven project management principles and practices in a new light as complementary to each other rather than competitive and learn to develop an adaptive approach to blend those principles and practices together in the right proportions to fit any situation There are many books on Agile and many books on traditional project management but what s very unique about this book is that it takes an objective approach to help you understand the strengths and weaknesses of both of those areas to see how they can work synergistically to improve project outcomes in any project The book includes discussion topics real world case studies and sample enterprise level agile frameworks that facilitate hands on learning as well as an in depth discussion of the principles behind both Agile and traditional plan driven project management practices to provide a more thorough level of understanding      Adaptive Optical System Technologies Domenico Bonaccini,Robert K. **Homer and the Epic** Andrew Lang, 1893 **The Sanskrit Epics** John Brockington, 2021-12-06 Mahabharata including Harivaṃśa and Rāmāyaṇa the two great Sanskrit Epics central to the whole of Indian Culture form the subject of this new work The book begins by examining the relationship of the epics to the Vedas and the role of the bards who produced them The core of the work a study of the linguistic and stylistic features of the epics precedes the examination of the material culture the social economic and political aspects and the religious aspects The final chapter presents the wider picture and in conclusion even looks into the future of epic studies In this long overdue survey work the author synthesizes the results of previous scholarship in the field Herewith a coherent view is built up of the nature and the significance of these two central epics both in themselves and in relation to Indian culture as a whole *Applications of Learning Classifier Systems* Larry Bull, 2012-08-13 The field called Learning Classifier Systems is populated with romantics Why shouldn't it be possible for computer programs to adapt learn and develop while interacting with their environments In particular why not systems that like organic populations contain competing perhaps cooperating entities evolving together John Holland was one of the earliest scientists with this vision at a time when so called artificial intelligence was in its infancy and mainly concerned with preprogrammed systems that didn't learn that like organisms had sensors took Instead Holland envisaged systems actions and had rich self generated internal structure and processing In so doing he foresaw and his work prefigured such present day domains as reinforcement learning and embedded agents that are now displacing the older standard At One focus was what Holland called classifier systems sets of competing rule like classifiers each a hypothesis as to how best to react to

some aspect of the environment or to another rule The system embracing such a rule population would explore its available actions and responses rewarding and rating the active rules accordingly Then good classifiers would be selected and reproduced mutated and even crossed a la Darwin and genetics steadily and reliably increasing the system's ability to cope
