Fertility Control 198 Handbook Of Experimental Pharmacology:

Fertility Control Ursula-F. Habenicht, Robert John Aitken, 2010-09-14 The world's population is growing at an unsustainable rate. From a baseline figure of one billion in 1800, global population is predicted to exceed nine billion by 2050, and 87.8% of this growth will be localized in less developed countries. Such uneven population growth will yield a harvest of poverty, malnutrition, disease, and environmental degradation that will affect us all. Amongst the complex mixture of political, social, cultural, and technological changes needed to address this issue, the development of improved methods of fertility regulation will be critical. The inadequacy of current contraceptive technologies is indicated by recent data suggesting that the contraceptive needs of over 120 million couples go unmet every year. As a direct consequence of this deficit, 38% of pregnancies are unplanned, and more than 50% end in an abortion, generating a total of 46 million abortions per annum, particularly among teenagers. If safe, effective contraceptives were available to every couple experiencing an unmet family planning need, 1.5 million lives would be saved each year. UNFPA 2003. Progress in contraceptive technology should not only generate more effective methods of regulating fertility but should also provide a range of methods to meet the changing needs of the world's population. Contraceptive practice was revolutionized in 1960 in the US and 1961 in Europe by the introduction of the oral contraceptive pill by Gregory Pincus. MC Chang and colleagues, based on fundamental hormone research conducted in Germany.

Becoming Female And Male Ramon Piñon Jr., 2018-08-31 *Becoming Female and Male: Our Extraordinary and Perilous Journey* focuses on critical aspects in the development and biology of our reproductive system. A wealth of information not readily available to the general reader is complemented with a rich assortment of historical perspectives and commentaries. It begins with the amazingly complex, seemingly miraculous processes that lead to the formation of the eggs and sperm, follows the fetal development of the genital tissues, the post-pubertal reproductive functions of females and males, the pubertal transition, and finally, our reproductive twilight. The next section focuses on fertilization and implantation, birth and lactation, and exciting new studies relating the origins of chronic adult diseases to our pre-birth environment in the womb. The third section covers pregnancy loss and birth defects, while the final section reviews birth control methods, the causes of infertility, and the new growth industry: assisted reproduction. In addition, three appendices supplement the main text and provide more detailed information about sex chromosomes, mutations, hormonal integration of the reproductive system, and disorders of sexual development.

Drug Delivery Monika Schäfer-Korting, 2010-03-10. In the view of most experts, pharmacology is on drugs, targets and actions. In the context, the drug as a rule is seen as an active pharmaceutical ingredient and not as a complex mixture of chemical entities of a well-defined structure. Today we are becoming more and more aware of the fact that delivery of the active compound to the target site is a key. The present volume gives a topical overview on various modern approaches to drug targeting, covering today's options for specific carrier systems allowing successful drug treatment at various sites of the body, difficult to address and allowing to increase the benefit/risk ratio to the optimum possible.

Drugs for the Control of Epilepsy Carl L. Faingold, Gerhard H. Fromm, 2019-06-04. Originally published in 1991, this book brings together the ideas of an international group of experts on clinical and experimental epilepsy. These authors consider how antiepileptic drugs may act on elements of neuronal networks to reduce seizure incidence and severity. The book addresses such topics as the four general classes of anticonvulsant drug mechanisms, major epilepsy models, the proposed mechanisms of action of major antiepileptic drugs and the clinical use of antiepileptic drugs in the treatment of various forms of human epilepsy. This volume is special for its focus on the neuronal network approach to epilepsy as well as for its comprehensive review and integration of human and animal data. Neurologists, pharmacologists, psychiatrists and other investigators actively working on epilepsy research will find this book to be a useful, thought-provoking reference volume.
