

FETAL PIG DISSECTION: EXTERNAL ANATOMY

External Anatomy

1. Determine the sex of your pig by looking for the urogenital opening. On females, this opening is located near the anus. On males, the opening is located near the umbilical cord.

If your pig is female, you should also note that urogenital papilla is present near the genital opening. Males do not have urogenital papilla.

Both males and females have rows of nipples, and the umbilical cord will be present in both.

What sex is your pig? _____

2. Make sure you are familiar with terms of reference: anterior, posterior, dorsal, ventral. In addition, you'll need to know the following terms:

Medial: toward the midline or middle of the body

Lateral: toward the outside of the body

Proximal: close to a point of reference

Distal: farther from a point of reference

Label the sides on the pig picture above

3. Open the pig's mouth and locate the hard and soft palate on the roof of the mouth. Can you feel your own hard and soft palate with your tongue?

Note the **teeth buds** (also known as **salivary papillae**) on the side of the tongue. Locate the esophagus at the back of the mouth. Feel the edge of the mouth for teeth. Does the fetal pig have teeth? _____

Are humans born with teeth? _____

Locate the **epiglottis**, a cone-shaped structure at the back of the mouth; a flap of skin helps to close this opening when a pig swallows. The **pharynx** is the cavity in the back of the mouth — it is the junction for food (esophagus) and air (trachea).

4. Gestation for the fetal pig is 112-115 days. The length of the fetal pig can give you a rough estimate of its age.

11 cm — 27 days

17 cm — 35 days

2.0 cm — 45 days

4 cm — 55 days

22 cm — 105 days

30 cm — birth

How old is your fetal pig? _____

5. Observe the toes of the pig. How many toes are on the feet? _____

Do they have an odd or even number of toes? _____

6. Observe the eyes of the pig, carefully remove the eyelid so that you can view the eye underneath. Does it seem well developed? Do you think pigs are born with their eyes open or shut? _____

7. Carefully lay the pig on one side in your dissecting pan and cut away the skin from the side of the face and upper neck to expose the **masseter muscle** that works the jaw, **lymph nodes**, and **salivary glands**. The salivary glands kind of look like chewing gum, and are often lost if you cut too deeply.
