Formattable Calendar 2014:

Multistate Analysis of Life Histories with R Frans Willekens, 2014-09-11 This book provides an introduction to multistate event history analysis. It is an extension of survival analysis in which a single terminal event endpoint is considered and the time to event is studied. Multistate models focus on life histories or trajectories conceptualized as sequences of states and sequences of transitions between states. Life histories are modeled as realizations of continuous time Markov processes. The model parameters transition rates are estimated from data on event counts and populations at risk using the statistical theory of counting processes. The Comprehensive R Network Archive CRAN includes several packages for multistate modeling. This book is about Biograph. The package is designed to enhance exploratory analysis of life histories and to make multistate modeling accessible. The package incorporates utilities that connect to several packages for multistate modeling including survival, eha, Epi, mvna, mstate, msm, and TraMineR for sequence analysis. The book is a hands-on presentation of Biograph and the packages listed. It is written from the perspective of the user. To help the user master the techniques and the software, a single data set is used to illustrate the methods and software. It is the subsample of the German Life History Survey which was also used by Blossfeld and Rohwer in their popular textbook on event history modeling. Another data set, the Netherlands Family and Fertility Survey, is used to illustrate how Biograph can assist in answering questions on life paths of cohorts and individuals. The book is suitable as a textbook for graduate courses on event history analysis and introductory courses on competing risks and multistate models. It may also be used as a self-study book. The R code used in the book is available online. Frans Willekens is affiliated with the Max Planck Institute for Demographic Research MPIDR in Rostock, Germany. He is Emeritus Professor of Demography at the University of Groningen, a Honorary Fellow of the Netherlands Interdisciplinary Demographic Institute NIDI in the Hague, and a Research Associate of the International Institute for Applied Systems Analysis IIASA, Laxenburg, Austria. He is a member of the Royal Netherlands Academy of Arts and Sciences KNAW. He has contributed to the modeling and simulation of life histories mainly in the context of population forecasting.
