✓ Exclusively available on IvyPanda

With the increasing dangers of human activity on wildlife and nature around the world, the issues of ecological and ecosystem longevity and sustainability have become of significant importance. Understanding the particularities of distinctive biomes and ecosystems allows for identifying their strengths and weaknesses, informing research-based and policy-making decisions. The reason why this species is important to the Amazon Rainforest ecosystem is that it interacts with numerous plant and animal species, "including trophic and non-trophic interactions" (Freire et al., 2021, p. 286). Since it provides food and protection to other species in the ecosystem, this characteristic defines it as a keystone species.

One example of invasive species in the Amazon Rainforest Ecosystem is *Vismia guianensis*. This species is a rough perennial plant highly competitive and strong in its habitat (da Costa et al., 2019). According to da Costa et al. (2019), *Vismia guianensis* has invaded Amazon Rainforests due to the deforestation of this ecosystem for agricultural purposes. With its development, this species has become competitive with
