#### Chapter 1 : Introduction to Compiler [Total Mark - 01]

Q. 1(a)(5) Define Compiler.

(1 Mark)

Ans. : **Compiler :**

Compiler is a program, which converts a source program (written in high level language) in an object program (may be any low level form either assembly or machine code). A computer understands only binary language. But writing programs in 1's and 0's is not possible. So we write programs in high level language. This program written in high level language should be converted to binary so that it could be executed. The conversion of a source program to a target program is called compilation of the program. This task of conversion is done by compiler / translator.

#### Chapter 2 : Lexical Analyzer [Total Marks - 17]

Q. 1(a)(1) Define Token.

(1 Mark)

Ans. : **Tokens :** Classes or category of similar lexemes such as identifier, number, constant, operator etc.

Q. 1(a)(2) Define Pattern.

(1 Mark)

Ans. : **Pattern :** Formal or informal description of a token such as an identifier can have at most 8 characters in which first character must be an alphabet and the successive characters can be either digits or alphabets. Pattern is rule that describes a token.

Q. 1(a)(3) Define Lexeme.

(1 Mark)

Ans. : **Lexemes :** Smallest logical units (words) from a program such as main, int, A, B, 10, if, + etc.

Q. 2(a) Write a short note on Input Buffering methods.

(7 Marks)

Ans. : **Input Buffering methods :**

Lexical analyzer reads the source program character by character from the secondary storage but it is costly, therefore, a block of data is first read into a buffer and then scanned by the lexical analyzer.

University from 1950 until his death in 1968 was a Visiting Professor at the University of California at Berkeley on five separate occasions During his 1955 visit to Berkeley he gave a course on continuous groups and his lectures were reproduced in the form of mimeographed notes Loewner planned to write a detailed book on continuous groups based on these lecture notes but the project was still in the formative stage at the time of his death Since the notes themselves have been out of print for several years Professor Harley Flanders Department of Mathematics Tel Aviv University and Professor Murray Protter Department of Mathematics University of California Berkeley have taken this opportunity to revise and correct the original fourteen lectures and make them available in permanent form Loewner became interested in continuous groups particularly with respect to possible applications in geometry and analysis when he studied the three volume work on transformation groups by Sophus Lie He managed to reconstruct a coherent development of the subject by synthesizing Lie's numerous illustrative examples many of which appeared only as footnotes The examples contained in this book are primarily

geometric in character and reflect the unique way in which Loewner viewed each of the topics he treated This book is part of the series Mathematicians of Our Time edited by Professor Gian Carlo Rota Department of Mathematics Massachusetts Institute of Technology Contents Transformation Groups Similarity Representations of Groups Combinations of Representations Similarity and Reducibility Representations of Cyclic Groups Representations of Finite Abelian Groups Representations of Finite Groups Characters Introduction to Differentiable Manifolds Tensor Calculus on a Manifold Quantities Vectors Tensors Generation of Quantities by Differentiation Commutator of Two Covariant Vector Fields Hurwitz Integration on a Group Manifold Representation of Compact Groups Existence of Representations Characters Examples Lie Groups Infinitesimal Transformation on a Manifold Infinitesimal Transformations on a Group Examples Geometry on the Group Space Parallelism First Fundamental Theorem of Lie Groups Mayer Lie Systems The Sufficiency Proof First Fundamental Theorem Converse Second Fundamental Theorem Converse Concept of Group Germ Converse of the Third Fundamental Theorem The Helmholtz Lie Problem

**Masterly's Series LAB MANUAL OF PHARMACEUTICS For B.Pharm First Year As Per GTU PCI SYLLABUS** **Control System Theory** Uday A. Bakshi, 2020-12-01 The book is written for an undergraduate course on the theory of Feedback Control Systems It provides comprehensive explanation of theory and practice of control system engineering It elaborates various aspects of time domain and frequency domain analysis and design of control systems Each chapter starts with the background of the topic Then it gives the conceptual knowledge about the topic dividing it in various sections and subsections Each chapter provides the detailed explanation of the topic practical examples and variety of solved problems The explanations are given using very simple and lucid language All the chapters are arranged in a specific sequence which helps to build the understanding of the subject in a logical fashion The book starts with explaining the various types of control systems Then it explains how to obtain the mathematical models of various types of systems such as electrical mechanical thermal and liquid level systems Then the book includes good coverage of the block diagram and signal flow graph methods of representing the various systems and the reduction methods to obtain simple system from the analysis point of view The book further illustrates the steady state and transient analysis of control systems The book covers the fundamental knowledge of controllers used in practice to optimize the performance of the systems The book emphasizes the detailed analysis of second order systems as these systems are common in practice and higher order systems can be approximated as second order systems The book teaches the concept of stability and time domain stability analysis using Routh Hurwitz method and root locus method It further explains the fundamentals of frequency domain analysis of the systems including co relation between time domain and frequency domain The book gives very simple techniques for stability analysis of the systems in the frequency domain using Bode plot Polar plot and Nyquist plot methods

It also explores the concepts of compensation and design of the control systems in time domain and frequency domain The classical approach loses the importance of initial conditions in the systems Thus the book provides the detailed explanation of modern approach of analysis which is the state variable analysis of the systems including methods of finding the state transition matrix solution of state equation and the concepts of controllability and observability The book also introduces the concept of discrete time systems including digital and sample data systems z transform difference equations state space representation pulse transfer functions and stability of linear discrete time systems The variety of solved examples is the feature of this book which helps to inculcate the knowledge of the design and analysis of the control systems in the students The book explains the philosophy of the subject which makes the understanding of the concepts very clear and makes the subject more interesting
