owl has been attributed to the loss of riparian areas before and after the turn of the 20th century. Currently the cactus ferruginous pygmy owl is chiefly found in southern Arizona in xeroriparian vegetation and wellstructured upland desertscrub. The primary threat to the remaining pygmy owl population appears to be continued habitat loss due to residential development. Important information gaps exist and prevent a full understanding of the current population status of the owl and its conservation needs.

Beck,2023-09-01 This open access book reviews the importance of ecological functioning within rangelands considering the complex inter relationships of production agriculture ecosystem services biodiversity and wildlife habitat. More than half of all lands worldwide and up to 70% of the western USA are classified as rangelands uncultivated lands that often support grazing by domestic livestock. The rangelands of North America provide a vast array of goods and services including significant economic benefit to local communities while providing critical habitat for hundreds of species of fish and wildlife. This book provides compendium of recent data and synthesis from more than 100 experts in wildlife and rangeland ecology in Western North America. It provides a current and in depth synthesis of knowledge related to wildlife ecology in rangeland ecosystems and the tools used to manage them to serve current and future wildlife biologists and rangeland managers in the working landscapes of the West. The book also identifies information gaps and serves as a jumping off point for future research of wildlife in rangeland ecosystems. While the content focuses on wildlife ecology and management in rangelands of Western North America the material has important implications for rangeland ecosystems worldwide.
