Highways Design Guide:

A Guide for Achieving Flexibility in Highway Design, 2004 Context sensitive solutions CSS reflect the need to consider highway projects as more than just transportation facilities Depending on how highway projects are integrated into the community they can have far reaching impacts beyond their traffic or transportation function CSS is a comprehensive process that brings stakeholders together in a positive proactive environment to develop projects that not only meet transportation needs but also improve or enhance the community Achieving a flexible context sensitive design solution requires designers to fully understand the reasons behind the processes design values and design procedures that are used This AASHTO Guide shows highway designers how to think flexibly how to recognize the many choices and options they have and how to arrive at the best solution for the particular situation or context It also strives to emphasize that flexible design does not necessarily entail a fundamentally new design process but that it can be integrated into the existing transportation culture This publication represents a major step toward institutionalizing CSS into state transportation departments and other agencies charged with transportation project development *Roadside Design Guide*, 1996-01-01 This document presents a synthesis of current information and operating practices related to roadside safety and is developed in metric units The roadside is defined as that area beyond the traveled way driving lanes and the shoulder if any of the roadway itself The focus of this guide is on safety treatments that minimize the likelihood of serious injuries when a driver runs off the road This guide replaces the 1989 AASHTO Roadside Design Guide

Highway Noise; a Design Guide for Highway Engineers Bolt, Beranek, and Newman, Bolt, Beranek, and Newman, inc, 1971 Various methods of assessing noise loudness and noise annoyance are reviewed and explained sources types and intensities of traffic noise are noted typical means of abatement and attenuation are described design criteria for various land uses ranging from low density to industrial are suggested and compared with the results of previous BBN and British systems for predicting annoyance and complaint and a design guide for predicting traffic noise capable of being programmed for batch and on line computer applications is presented in form suitable for use as a working tool A flow diagram describes the interrelationships of elements in the traffic noise prediction methodology and each element is discussed in detail in the text The text is presented of a tape recording that takes the listener through a series of traffic situations with such variables as traffic distance flow velocity distance outdoors and indoors and presence or absence of absorbers and attenuators Highway Safety Design and Operations Guide, 1997, 1997 A replacement to the publication entitled Highway design and operational practices related to highway safety also known as The Yellow Book and most recently published in 1974 **Highway Safety Design and Operations Guide, 3rd Edition**, **Road Design Manual** Minnesota. Department of Highways, 1961 Roadside Design Guide American Association of State Highway and Transportation Officials. Task Force for Roadside Safety, 2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in

dual units metric and U S Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition AASHTO website *Highways, a Guide to Their Design and Re-design* Lester Abbey,1989 Superelevation Distribution Methods and Transition Designs James A. Bonneson,2000 Practical Highway Design Solutions Hugh W. McGee,2013 Chapter one Introduction Chapter two Results of initial survey of state departments of transportation Chapter three Background information on project development and design methods Chapter four Profiles of states with practical design policies Chapter five Findings conclusions and suggested research
