Borg, J. Lingoes, 2012-12-06 Multidimensional Similarity Structure Analysis comprises a class of models that represent similarity among entities for example variables items objects persons etc in multidimensional space to permit one to grasp more easily the interrelations and patterns present in the data The book is oriented to both researchers who have little or no previous exposure to data scaling and have no more than a high school background in mathematics and to investigators who would like to extend their analyses in the direction of hypothesis and theory testing or to more intimately understand these analytic procedures The book is replete with examples and illustrations of the various techniques drawn largely but not restrictively from the social sciences with a heavy emphasis on the concrete geometric or spatial aspect of the data representations      Curriculum Review, 1985      **Linear Algebra with Applications** Jeffrey Holt, 2013-04-01 Many students of linear algebra hit a wall at mid semester Having spent the first part of the term doing mostly computational work they are unprepared for the rigors of conceptual thinking in an abstract setting that is frequently the focus of the second half of the course Holt s Linear Algebra with Applications blends computational and conceptual topics throughout Early treatment of conceptual topics in the context of Euclidean space gives students more time and a familiar setting in which to absorb

them This organization also makes it possible to treat eigenvalues and eigenvectors earlier than in most texts Abstract vector spaces are introduced later once students have developed a solid conceptual foundation Concepts and topics are frequently accompanied by applications to provide context and motivation Because many students learn by example Linear Algebra with Applications provides a large number of representative examples over and above those used to introduce topics The text also has over 2500 exercises covering computational and conceptual topics over a range of difficulty levels      **Index of Mathematical Papers** ,1985
