Integrating classical knowledge of chromosome organisation with recent molecular and functional findings this book presents an up to date view of chromosome organisation and function for advanced undergraduate students studying genetics The organisation and behaviour of chromosomes is central to genetics and the equal segregation of genes and chromosomes into daughter cells at cell division is vital This text aims to provide a clear and straightforward explanation of these complex processes Following a brief historical introduction the text covers the topics of cell cycle dynamics and DNA replication mitosis and meiosis the organisation of DNA into chromatin the arrangement of chromosomes in interphase euchromatin and heterochromatin nucleolus organisers centromeres and telomeres lampbrush and polytene chromosomes chromosomes and evolution chromosomes and disease and artificial chromosomes Topics are illustrated with examples from a wide variety of organisms including fungi plants invertebrates and vertebrates This book will be a valuable resource for plant animal and human geneticists and cell biologists Originally a zoologist Adrian Sumner has spent over 25 years studying human and other mammalian chromosomes with the Medical Research Council UK One of the pioneers of chromosome banding he has used electron microscopy and immunofluorescence to study chromosome organisation and function and latterly has studied factors involved in chromosome separation at mitosis Adrian is an Associate Editor of the journal Chromosome Research acts as a consultant biologist and is also Chair of the Committee of the International Chromosome Conferences The most up to date overview of chromosomes in all their forms Introduces cutting edge topics such as artificial chromosomes and studies of telomere biology Describes the methods used to study chromosomes The perfect complement to Turner *Essentials of Biology* Holt Rinehart & Winston, 1998 An Atlas of Mammalian Chromosomes Tao C. Hsu, Kurt Benirschke, 2012-12-06 In recent years because of advances in karyological techniques we have witnessed a remarkable renewal of interest in studies of mammalian chromosomes These techniques generally involving the use of tissue culture colchicine and hypotonic solution pretreatments allow for a much clearer display of metaphase chromosomes of mammalian cells than the classic direct squash or tissue section methods Consequently what was known about the chromosome complement of most mammals must be revised The most astonishing revision of course was that made by Tjio and Levan in 1956 who demonstrated that the diploid number of man is 46 not 48 as previously believed Similar revisions will have to be made for many other mammalian species either in number or in karyotype structure Many animals are being examined cytologically for the first time The findings are now extensive and scattered they appear in numerous periodicals and newsletters or they are kept in cytologists file drawers

without being published It is difficult to have access to pertinent data for comparison among related species or for evaluation of various karyological characteristics within a karyotype Such evaluations can be done only when reasonably uniform material is collected and placed side by side for comparison accompanied by relative references We considered that probably an Atlas of Mammalian Chromosomes would fulfill such a need Needless to say it is impossible to present karyotypes of all mammalian species at one time

Molecular and Cellular Mechanisms in Reproduction and Early Development Rafael A. Fissore, Adam Burton, Karin Lykke-Hartmann, 2019-08-20 The Research Topic aims to support progress towards understanding the different sets of developmental processes that are absolutely required to complete all the steps essential for successful embryonic development under physiological conditions We sought contributions that dealt with single cells interaction between cells as well as intra and extracellular signal transduction The Research Topic presents original studies covering experimental and theoretical approaches descriptions of new methodologies reviews and opinions

Apoptosis, Senescence and Cancer David A. Gewirtz, Shawn E. Holt, Steven Grant, 2007-10-23 Apoptosis Senescence and Cancer provides insight into established practices and research into apoptosis and senescence by thoroughly examining novel and emerging techniques and research in the fields of cell death pathways senescence growth arrest drugs and resistance DNA damage response and other topics which still hold mysteries for researchers The volume is divided into six easy to follow sections The first is Apoptosis and Alternative Modes of Cell Death followed by chapters on Telomeres and Telomerase Senescence Genomic Instability and Tumorigenesis The third part covers DNA Damage Response Signaling Pathways and Tumorigenesis while the fourth delves into Resistance and Sensitization The book concludes with Established Cancer Therapies and a section which looks toward the future with Recent and Developing Cancer Therapies In total this volume provides basic scientists and clinicians with a deeper and more complete understanding of the cellular responses of malignancies which may determine the effectiveness of treatment both in the initial stages of the disease as well as in disease recurrence

Developmental Studies on Giant Chromosomes W. Beermann, 2013-06-29 Earlier titles in this series have directed attention to selected questions of current theoretical or practical interest in developmental biology without special emphasis upon individual biological systems To choose giant polytene chromosomes as the common denominator of a new volume may at first sight seem to set rather arbitrary restrictions upon a coherent discussion of the basic problem of cellular differentiation However the reader will find out for himself that on the contrary such a limitation though dictated by the material focuses the analysis upon one essential point

the differential release of genetic information from operational subunits of the eukaryotic chromosome In the organization of this volume we have not striven for completeness some indeed may feel that the work on Sciarids is underrepresented but the various contributors have made every effort to render a thorough and up to date picture of the situation in their particular field and on this basis to discuss all possible angles of general biological interest Authors and editors have agreed to dedicate this volume to the memory of JACK SCHULTZ

Biochemistry Donald Voet, Judith G. Voet, 2010-12-01 The Gold Standard in Biochemistry text books Biochemistry 4e is a modern classic that has been thoroughly revised Don and Judy Voet explain biochemical concepts while offering a unified presentation of life and its variation through evolution Incorporates both classical and current research to illustrate the historical source of much of our biochemical knowledge *Laboratory Hamsters* G. L. Van Hoosier, Charles W. McPherson, 1987-10-28

Telomeres and Telomerase in Cancer Keiko Hiyama, 2009-03-18 Telomerase an enzyme that maintains telomeres and endows eukaryotic cells with immortality was first discovered in tetrahymena in 1985 In 1990s it was proven that this enzyme also plays a key role in the infinite proliferation of human cancer cells Now telomere and telomerase are widely accepted as important factors involved in cancer biology and as promising diagnostic tools and therapeutic targets Recently role of telomerase in cancer stem cells has become another attractive story Until now there are several good books on telomere and telomerase focusing on biology in ciliates yeasts and mouse or basic sciences in human providing basic scientists or students with updated knowledge [Index Medicus](#), 2002 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings
