

CHAPTER 6 ACTIVE READING WORKSHEETS**PHOTOSYNTHESIS****Section 6-1: The Light Reactions**

Read the passage below, which covers topics from your textbook.
Answer the questions that follow.

¹ Located in the membrane of the thylakoids are a variety of pigments, the most important of which are called **chlorophylls**.

² There are several different types of chlorophylls. ³ The two most common types are known as chlorophyll *a* and chlorophyll *b*.

⁴ A slight difference in molecular structure between chlorophyll *a* and chlorophyll *b* causes the two molecules to absorb different colors of light. ⁵ Chlorophyll *a* absorbs less blue light but more red light than chlorophyll *b* absorbs. ⁶ Neither chlorophyll *a* nor chlorophyll *b* absorbs much green light. ⁷ Instead, they allow green light to be reflected or transmitted. ⁸ That is why leaves and other plant structures that contain large amounts of chlorophyll look green.

⁹ Only chlorophyll *a* is directly involved in the light reactions of photosynthesis. ¹⁰ Chlorophyll *b* assists chlorophyll *a* in capturing light energy; therefore, chlorophyll *b* is called an accessory pigment.

Read each question and write your answer in the space provided.

SKILL: Identifying Main Ideas

1. Which sentence identifies the main idea of the first paragraph?

2. What supporting details are described by the remaining sentences in the first paragraph?

Read the questions and write your answers in the spaces provided.

SKILL: Recognizing Similarities and Differences

One reading skill is the ability to recognize similarities and differences between two phrases, ideas, or things. This skill is sometimes known as comparing and contrasting. Some clue words that writers use when pointing out similarities or making comparisons are *like*, *as*, *similarly*, *similar to*, *neither*, *nor*, and *in the same way*. Some clue words that writers use when pointing out differences or making contrasts include *however*, *but*, *although*, *on the contrary*, *still*, *either*, *or*, and *on the other hand*.

Photosynthesis is an active area of research in which many exciting developments have taken place in the last few years. This book gives an overview of the present understanding of all areas of molecular processes of photosynthesis. It is based on the international literature available in the summer of 1986 and much unpublished material. The new material contained in this book together with a basic framework of established concepts provide a useful source of reference on the biochemical and biophysical aspects of photosynthesis in plants and bacteria. The book is written by specialists in the various areas of photosynthesis and is useful both for workers in these areas as a source of specialized information as well as for non photosynthesists who want to become informed about recent developments and basic concepts in this area.

Photosynthesis R.P. Gregory, 2012-12-06. Photosynthesis the capture of light energy by living organisms is a simple enough concept but its investigation draws on the resources of disciplines from all fields of science. The aim of this text is to provide a clear stimulating and essentially affordable coverage for undergraduate students of biology. The activity of science is debate and practical experiment its product is a body of propositions which at any given time reflects the judgment and prejudices of those taking part. The value of a proposition is related to the conceivable alternatives and writing it down without its context creates the false impression that science progresses by compilation of an increasing list of absolute truths. It does not the facts and figures presented in the following pages have no intrinsic value unless they can be used by the reader to support an argument or point of view. In short the reader is urged to respond. So what to every item. Secondly ideas like other foods should be date stamped science is inseparable from its history. I have set out time charts to represent the evolution of our understanding in certain areas. I have assumed that the reader is pursuing a course with a content of biochemistry microbiology and plant science or has access to basic texts. I have assumed also that common methods such as

spectrophotometry chromatography and electrophoresis as well as the techniques of molecular biology will be either part of the same course or in active use nearby
