Climate Change Juan A. Blanco, Houshang Kheradmand, 2011-09-06 This book provides an interdisciplinary view of how to prepare the ecological and socio economic systems to the reality of climate change Scientifically sound tools are needed to predict its effects on regional rather than global scales as it is the level at which socio economic plans are designed and natural ecosystem reacts The first section of this book describes a series of methods and models to downscale the global predictions of climate change estimate its effects on biophysical systems and monitor the changes as they occur To reduce the magnitude of these changes new ways of economic activity must be implemented The second section of this book explores different options to reduce greenhouse emissions from activities such as forestry industry and urban development However it is becoming increasingly clear that climate change can be minimized but not avoided and therefore the socio economic systems around the world will have to adapt to the new conditions to reduce the adverse impacts to the minimum The last section of this book explores some options for adaptation
