

# Primary vs Secondary DNS Servers

## Primary

- Acts as the authoritative source for DNS records of a domain and directly responds to DNS queries.
- Sources and maintains DNS data directly from the domain owner.
- Typically lacks redundancy or failover capabilities.

VS

## Secondary

- Functions as a backup server, replicating DNS data from the primary server to enhance redundancy and reliability.
- Obtains data from the primary server through zone transfers.
- Offers redundancy, ensuring continued service availability in case the primary server encounters issues.
