*Madness Is Civilization* Michael E. Staub, 2011 In the 1960s and 1970s a popular diagnosis

for America's problems was that society was becoming a madhouse. In this intellectual and cultural history Michael E. Staub examines a time when many believed insanity was a sane reaction to obscene social conditions; psychiatrists were agents of repression; asylums were gulags for society's undesirables; and mental illness was a concept with no medical basis. *Madness Is Civilization* explores the general consensus that societal ills from dysfunctional marriage and family dynamics to the Vietnam War, racism, and sexism were at the root of mental illness. Staub chronicles the surge in influence of socially attuned psychodynamic theories along with the rise of radical therapy and psychiatric survivors' movements. He shows how the theories of antipsychiatry held unprecedented sway over an enormous range of medical, social, and political debates until a bruising backlash against these theories, part of the reaction to the perceived excesses and self-absorptions of the 1960s, effectively distorted them into caricatures. Throughout, Staub reveals that at stake in these debates of psychiatry and politics was nothing less than how to think about the institution of the family, the nature of the self, and the prospects for and limits of social change. The first study to describe how social diagnostic thinking emerged, *Madness Is Civilization* casts new light on the politics of the postwar era.

*The Golden Thread* Fuad Udemans, 2013. This book is an account of a ten-year experiment whereby the scientist became an entrepreneur so as to experience his own theoretical model applied in a live social system. Society's profit motives and the clinical nature of science became muddled with norms, rules, and laws of social systems, and how different people applied and responded to these rules. The insights to be gained from this journey are often surprising. The book highlights many counterintuitive outcomes. It also reveals how certain individuals interpret society's rules and norms despite their design to ensure fair and equitable social systems. Indeed, the manipulation of social laws and standards by those with strong fields of power is self-evident, and it is explored in a unique manner. Understanding how the field of power can be manipulated suggests that no matter how bleak one's current position may be, it is very possible and relatively easy to escape conditions of poverty, oppression, and subjugation—vital issues that citizens in all countries face today.

*The Oxford Handbook of Causal Reasoning* Michael Waldmann, 2017-03-30. Causal reasoning is one of our most central cognitive competencies enabling us to adapt to our world. Causal knowledge allows us to predict future events or diagnose the causes of observed facts. We plan actions and solve problems using knowledge about cause-effect relations. Although causal reasoning is a component of most of our cognitive functions, it has been neglected in cognitive psychology for many decades. *The Oxford Handbook of Causal Reasoning* offers a state-of-the-art review of the growing field and its contribution to the world of cognitive science. The Handbook begins with an introduction of competing theories of causal learning and reasoning. In the next section, it presents research about basic cognitive functions involved in causal cognition, such as perception, categorization, argumentation, decision making, and induction. The following section examines research on domains that embody causal relations, including intuitive physics, legal and moral reasoning, psychopathology, language, social cognition, and the roles of space and time. The final section presents research from neighboring fields that study developmental

phylogenetic and cultural differences in causal cognition The chapters each written by renowned researchers in their field fill in the gaps of many cognitive psychology textbooks emphasizing the crucial role of causal structures in our everyday lives This Handbook is an essential read for students and researchers of the cognitive sciences including cognitive developmental social comparative and cross cultural psychology philosophy methodology statistics artificial intelligence and machine learning
