From Influence to Inhabitation James E. Christie, 2019-10-02 This book describes how and why the early modern period witnessed the marginalisation of astrology in Western natural philosophy and the re adoption of the cosmological view of the existence of a plurality of worlds in the universe allowing the possibility of extraterrestrial life Founded in the mid 1990s the discipline of astrobiology combines the search for extraterrestrial life with the study of terrestrial biology especially its origins its evolution and its presence in extreme environments This book offers a history of astrobiology s attempts to understand the nature of life in a larger cosmological context Specifically it describes the shift of early modern cosmology from a paradigm of celestial influence to one of celestial inhabitation Although these trends are regarded as consequences of Copernican cosmology and hallmarks of a modern world view they are usually addressed separately in the historical literature Unlike others this book takes a broad approach that examines the relationship of the

G. Blagrove, 2025-05-23 Abstract This book explores the factors that influence the acceptance or rejection of the Big Bang theory and the theory of biological evolution The rejection of either theory can occur despite the time that has elapsed since the original theories were proposed and their wider acceptance The study critically examines the biographies of individuals establishing the factors that influence their rejection or acceptance of either theory The book concludes that individuals are affected by multiple factors and explores how these findings may contradict other studies which identify religious belief as the driver for rejection The author proposes an original theory of opinion formation that is specific to both scientific theories and suggests the use of inclusive teaching methods and historical narrative within science lessons which may assist in explaining to students the story of discovery of each scientific theory as well as teaching the theory itself The study also concludes that the rejection of both theories particularly by older participants may be linked to past discredited theories including the Steady State theory and the theory of Panspermia
