Sensor Networks Gianluigi Ferrari, 2010-03-10 The idea of this book comes from the observation that sensor networks represent a topic of interest from both theoretical and practical perspectives The title and lines that sensor networks offer the unique opportunity of clearly linking theory with practice In fact owing to their typical low cost academic researchers have the opportunity of implementing sensor network testbeds to check the validity of their theories algorithms protocols etc in reality Likewise a practitioner has the opportunity of understanding what are the principles behind the sensor networks under use and thus how to properly tune some accessible network parameters to improve the performance On the basis of the observations above the book has been structured in three parts Part I is denoted as Theory since the topics of its chapters are apparently detached from real scenarios Part II is denoted as Theory and Practice since the topics of its three chapters although theoretical have a clear connection with specific practical scenarios Part III is denoted as Practice since the topics of its three chapters are clearly related to practical applications

Age of Information Yin Sun, Igor Kadota, Rajat Talak, Eytan Modiano, 2019-12-12 Information usually has the highest value when it is fresh For example real time knowledge about the location orientation and speed of motor vehicles is imperative in autonomous driving and the access to timely information about stock prices and interest rate movements is essential for developing trading strategies on the stock market The Age of Information AoI concept together with its recent extensions provides a means of quantifying the freshness of information and an opportunity to improve the performance of real time systems and networks Recent research advances on AoI suggest that many well known design principles of traditional data networks for e g providing high throughput and low delay need to be re examined for enhancing information freshness in rapidly emerging real time applications This book provides a suite of analytical tools and insightful results on the generation of information update packets at the source nodes and the design of network protocols forwarding the packets to their destinations The book also points out interesting connections between AoI concept and information theory signal processing and control theory which are worthy of future investigation
