$y = 1.50x$ to represent the situation.

$$y = 0.50x + 20$$

$y = 1.50x$ to represent the situation.

SALES For Exercises 11–13, use the following information.

A used book store also started selling used CDs and videos. In the first week, the store sold 40 used CDs and videos, at \$4.00 per CD and \$6.00 per video. The sales for both CDs and videos totaled \$240.00.

$$x + y = 40$$

$4x + 6y = 240$

$$x + y = 40$$

$$4x + 6y = 240$$

Applied Partial Differential Equations

J. David Logan, 2012-12-06 This textbook is for the standard one semester junior senior course that often goes by the title Elementary Partial Differential Equations or Boundary Value Problems The audience usually consists of students in mathematics engineering and the physical sciences The topics include derivations of some of the standard equations of mathematical physics including the heat equation the wave equation and the Laplace's equation and methods for solving those equations on bounded and unbounded domains Methods include eigenfunction expansions or separation of variables and methods based on Fourier and Laplace transforms Prerequisites include calculus and a post calculus differential equations course There are several excellent texts for this course so one can legitimately ask why one would wish to write another A survey of the content of the existing titles shows that their scope is broad and the analysis detailed and they often exceed five hundred pages in length These books generally have enough material for two three or even four semesters Yet many undergraduate courses are one semester courses The author has often felt that students become a little uncomfortable when an instructor jumps around in a long volume searching for the right topics or only partially covers some topics but they are secure in completely mastering a short well defined introduction This text was written to provide a brief one semester introduction to partial differential equations
