

Electromagnetic Energy and Light

How does light travel? Do different colors of light travel at the same speed?

What?

Light is electromagnetic energy. The visible light spectrum is a tiny part of the electromagnetic spectrum. The visible spectrum of light is a rainbow of colors. Shorter wavelengths have higher frequencies and are associated with higher energy. The longer wavelengths of visible light have lower frequencies and are associated with lower energy. The speed of light is constant in a vacuum, but it slows down when it travels through a medium. The speed of light in a vacuum is approximately 3.0×10^8 m/s. The speed of light in a medium is given by $v = c/n$, where n is the refractive index of the medium.
