- (a) A transportation problem consists of m supply and n demand destinations. Each destination must be supplied by a certain supply constraint. Each supply source is subject to the supply constraint. The supply and demand constraints define a feasible transportation problem.
- (b) A transportation problem is feasible if and only if the total supply is equal to the total demand.
- (c) x_{ij} is the amount of goods shipped from source i to destination j .
- (d) The total cost of a transportation problem is the sum of the cost of each unit of goods shipped from source i to destination j , multiplied by the amount of goods shipped from source i to destination j .
- (e) The optimal solution to a transportation problem is the solution that minimizes the total cost.
- (f) The optimal solution to a transportation problem is unique if and only if the total cost is minimized.
- (g) The optimal solution to a transportation problem is not unique if and only if the total cost is not minimized.
- (h) The optimal solution to a transportation problem is not unique if and only if the total cost is not minimized.
- (i) The optimal solution to a transportation problem is not unique if and only if the total cost is not minimized.
