

## Answers to End-of-Chapter Questions (11 EDITION)

- 2-1** The opportunity cost is the rate of interest one could earn on an alternative investment with a risk equal to the risk of the investment in question. This is the value of  $I$  in the TVM equations, and it is shown on the top of a time line, between the first and second tick marks. It is not a single rate—the opportunity cost rate varies depending on the riskiness and maturity of an investment, and it also varies from year to year depending on inflationary expectations (see Chapter 6).
- 2-2** True. The second series is an uneven cash flow stream, but it contains an annuity of \$400 for 8 years. The series could also be thought of as a \$100 annuity for 10 years plus an additional payment of \$100 in Year 2, plus additional payments of \$300 in Years 3 through 10.
- 2-3** True, because of compounding effects—growth on growth. The following example demonstrates the point. The annual growth rate is  $I$  in the following equation:
- $$\$1(1 + I)^{10} = \$2.$$
- We can find  $I$  in the equation above as follows:
- Using a financial calculator input  $N = 10$ ,  $PV = -1$ ,  $PMT = 0$ ,  $FV = 2$ , and  $I/YR = ?$ . Solving for  $I/YR$  you obtain 7.18%.
- Viewed another way, if earnings had grown at the rate of 10% per year for 10 years, then EPS would have increased from \$1.00 to \$2.59, found as follows: Using a financial calculator, input  $N = 10$ ,  $I/YR = 10$ ,  $PV = -1$ ,  $PMT = 0$ , and  $FV = ?$ . Solving for  $FV$  you obtain \$2.59. This formulation recognizes the “interest on interest” phenomenon.
- 2-4** For the same stated rate, daily compounding is best. You would earn more “interest on interest.”
- 2-5** False. One can find the present value of an embedded annuity and add this PV to the PVs of the other individual cash flows to determine the present value of the cash flow stream.
- 2-6** The concept of a perpetuity implies that payments will be received forever.  $PV(\text{Perpetuity}) = PV(\text{Perpetuity})(1 + I)^{-\infty} = \infty$ .
- 2-7** The annual percentage rate (APR) is the periodic rate times the number of periods per year. It is also called the nominal, or stated, rate. With the “Truth in Lending” law, Congress required that financial institutions disclose the APR so the rate charged would be more “transparent” to consumers. The APR is only equal to the effective annual rate when compounding occurs annually. If more frequent compounding occurs, the effective rate is always greater than the annual percentage rate. Nominal rates can be compared with one another, but only if the instruments being compared use the same number of compounding periods per year. If this is not the case, then the instruments being compared should be put on an effective annual rate basis for comparisons.
- 2-8** A loan amortization schedule is a table showing precisely how a loan will be repaid. It gives the required payment on each payment date and a breakdown of the payment, showing how much is interest and how much is repayment of principal. These schedules can be used for any loans that are paid off in installments over time such as automobile loans, home mortgage loans, student loans, and many business loans.

*Teaching in the 21st Century* Joanne Pauley, 1995 Among the issues facing teachers as the 21st century approaches are the prevalence of violence growing racial and socioeconomic divisions in society and lack of parental involvement Activities gathered from articles in educational journals are suggested to help children voice their experiences thoughts and concerns about violence Some of these activities are inviting a police representative to visit the classroom having children become aware of violence on a favorite television program and then rewriting the show without violence and helping children feel safe by assisting them in writing the names of people and places to which they can go when feeling

scared Teachers must be aware of not passing on cultural stereotypes while elementary school children are not able to conceptualize socioeconomic differences in terms of profession and status in the current consumer oriented world the advantages of wealth and disadvantages of poverty soon become evident to them Also teachers should learn as much as possible about the dynamics of their communities and recognize the messages that children are absorbing in their daily experience Suggestions for promoting parental involvement include recruiting a volunteer to become a liaison between teacher and parents showing respect for parents by treating them as co workers rather than as free help asking for parents input and thanking them for their participation ND
