Powering the Future Daniel B. Botkin, 2010-03-23 Dr. Daniel B. Botkin objectively assesses the true prospects, limitations, costs, risks, dangers, and tradeoffs associated with every leading and emerging source of energy, including oil, natural gas, coal, hydroelectric, nuclear, wind, solar, ocean power, and biofuels. Next, Botkin addresses the energy distribution system, outlining how it currently works, identifying its inefficiencies, and reviewing options for improving it. Finally, Botkin turns to solutions, offering a realistic, scientifically and economically viable path to a sustainable energy independent future, one that can improve the quality of life for Americans and for people around the world. **The Future of Fossil Fuels** What can we realistically expect from oil, gas, and coal? **Will Alternative Energy Sources Really Matter?** Running the numbers on solar, wind, biofuels, and other renewables. **Must We All Wear Sweaters and Live in Caves?** The right role for efficiency and why energy minimalism isn't the solution. **Where We Can Start and What Will Happen if We Don't?** No magic bullet, but there are sensible, realistic solutions.

Critical Minerals, Sustainability, and the Energy Transition in the Global South Susan Nakanwagi, 2024-11-14 This book addresses the relationship between efficient management of critical minerals and sustainability in the Global South, including Sub-Saharan Africa. Critical minerals are essential raw materials for the technologies that are pivotal in today's energy transition. However, critical mineral host states and communities face social, economic, ecological, political, technological, and governance injustices. The book contends that the criteria currently

used in assessing criticality and critical mineral development do not fulfil the sustainable development ambitions of developing countries and that broader considerations must be taken into account to include the stakeholders involved as well as the spatial dimension of the critical mineral value chain. In particular, the book argues that the law must consider the broader context in which minerals become critical to particular processes. It positions this argument within the current context of climate change, the just energy transition, the minerals energy nexus and geopolitical tensions. By analysing the copper cobalt value chain through case studies on DRC, Zambia, China and the EU, the book provides new avenues for critical mineral development and acknowledges the necessity for sustainability amidst the exacerbated impacts of climate change. Addressing a key challenge of the global energy transition, the book argues for a just holistic framework which includes parameters such as domestic value addition, human rights in business development, environmental sensitivity, the development of communication channels from remote marginalised communities to international policymakers and the re-designing of criticality considerations beyond supply and economic aspects.

Reinventing Fire Amory Lovins, 2011-10-15

Oil and coal have built our civilization, created our wealth and enriched the lives of billions. Yet their rising costs to our security, economy, health and environment now outweigh their benefits. Moreover, that long-awaited energy tipping point where alternatives work better than oil and coal and compete purely on cost is no longer decades in the future. It is here and now. And it is the fulcrum of economic transformation. A global clean energy race has emerged with astounding speed. The ability to operate without fossil fuels will define winners and losers in business and among nations. In *Reinventing Fire*, Amory Lovins and Rocky Mountain Institute offer a new vision to revitalize business models, end run Washington gridlock and win the clean energy race not forced by public policy but led by business for enduring profit. This groundbreaking roadmap reveals market-based solutions across the transportation, building industry and electricity sectors. It highlights pathways and competitive strategies for a 158% bigger 2050 U.S. economy that needs no oil, no coal, no nuclear energy, one third less natural gas and no new inventions. This transition would cost 5 trillion less than business as usual without counting fossil fuels' huge hidden costs. It requires no new federal taxes, subsidies, mandates or laws. The policy innovations needed to unlock and speed it need no Act of Congress. Whether you care most about profits and jobs, national security, health or environmental stewardship, *Reinventing Fire* charts a pragmatic course that makes sense and makes money. With clarity and mastery, Lovins and RMI point out the astounding opportunities for enterprises to create the new energy era. Drawing praise from President Bill Clinton, former National Security Advisor Robert McFarlane and a host of others, *Reinventing Fire* has piqued the interest of world leaders, business leaders and political strategists.

80% of their time in meetings and why that's exactly where they should be and why they get paid so much Looking at life behind the red tape The Org shows why the path from workshop to corporate behemoth is pockmarked with tradeoffs and competing incentives but above all demonstrates why organizations are central to human achievement **EBOOK: Using Information Technology Complete Edition** Brian Williams, 2012-03-16 EBOOK Using Information Technology Complete Edition *Doughnut Economics* Kate Raworth, 2017 A Financial Times Best Book of 2017 Economics 800 CEO Read Best Business Book of 2017 Current Events redesign money finance and business to be in service to people and create economies that are regenerative and distributive by design Named after the now iconic doughnut image that Raworth first drew to depict a sweet spot of human prosperity an image that appealed to the Occupy Movement the United Nations eco activists and business leaders alike Doughnut Economics offers a radically new compass for guiding global development government policy and corporate strategy and sets new standards for what economic success looks like Raworth handpicks the best emergent ideas from ecological behavioral feminist and institutional economics to complexity thinking and Earth systems science to address this question How can we turn economies that need to grow whether or not they make us thrive into economies that make us thrive whether or not they grow Simple playful and eloquent Doughnut Economics offers game changing analysis and inspiration for a new generation of economic thinkers *Carbon Pricing* Larry Kreiser, Mikael Skou Andersen, Birgitte Egelund Olsen, Stefan Speck, Janet E.
