

Lesson 7.81 Quadratic and Absolute Value Inequalities

- ✓ What methods are used to solve and graph quadratic inequalities?
- ✓ How are absolute value functions graphed?
- ✓ What methods are used to solve and graph absolute value inequalities?

Key Concepts	Practice
<ul style="list-style-type: none"> One-variable quadratic inequalities: Set equal to zero, solve quadratic equation, test intervals. Two-variable quadratic inequalities: Graph the quadratic function and test a point to determine shaded region. Absolute Value inequalities: When $ax + b < c$, rewrite as $-c < ax + b < c$. When $ax + b > c$, rewrite as $ax + b < -c$ or $ax + b > c$. 	<ol style="list-style-type: none"> Solve $x^2 > 5x + 6$. Graph the solution to $y \leq x^2 + 5x + 6$. Graph $y = 3 x - 2$ and identify the domain, range, and intercepts. Solve $x - 4 \geq 7$. <p>(see paper attached for answers)</p>

Practice workspace and your additional notes/examples:

Use the following graphing utility if needed: www.desmos.com/calculator

First you rewrite the inequality in standard form, with zero on one side. Graph the quadratic function and determine where it is above or below the x-axis. If the inequality involves "less than," then determine the x-values where the function is below the x-axis.

They create V-Shaped graphs. The minus in front of your absolute value tells you that the V-Shape will open downward. So, the line to the left of -3 will slope upward toward x=-3. And it will slope down as it moves to the right of -3.

To solve, inequalities with absolute values, use a number line to see how far the absolute value is from zero. Split into two cases: when it is positive or negative. Solve each case with algebra. The answer is both cases together, in intervals or words.

Lesson 7.82 Systems of Inequalities

- ✓ How are solutions found to a system of inequalities?
- ✓ How are solutions to systems of inequalities interpreted in a real-world context?

Key Concepts	Practice
<ul style="list-style-type: none"> Graph each function. A solid line or curve is used for \leq or \geq, while a dashed line or curve is used for $<$ or $>$. Substitute an ordered pair into the inequalities to determine the overlapping shaded region. Determine if a solution is viable or non-viable. 	<p>Solve the system by graphing:</p> $y < -x^2 + 4x \text{ and } y \geq x^2$ <p>(see attached paper for answers)</p>

Practice workspace and your additional notes/examples:

Use the following graphing utility if needed: www.desmos.com/calculator

The solution to a system of two linear inequalities is a region that contains the solutions to both inequalities. To find this region, you will graph each inequality separately and then locate the region where they are both true.

A system of linear inequalities is often used to determine the best solution to a problem. This solution could be as simple as determining how many of a product should be produced to maximize a profit or as complicated as determining the correct combination of drugs to give a patient.
