Boute, 2004-10-11 Professional engineers can often be distinguished from other designers by the engineers ability to use mathematical models to describe and 1 analyze their products This observation by Parnas describes the de facto professional standards in all classical engineering disciplines civil mechanical electrical etc Unfortunately it is in sharp contrast with current industrial practice in software design where mathematical models are hardly used at all even by those who 2 in Holloway s words aspire to be engineers The rare exceptions are certain critical applications where mathematical techniques are used under the general name formal methods Yet the same characteristic that make formal methods an necessity in critical applications make them also advantageous in everyday software design at various levels from design efficiency to software quality Why then is education failing with respect to formal methods failing to convince students academics and practitioners alike

that formal methods are truly pragmatic failing to overcome a phobia of formality and mathematics failing to provide students with the basic skills and understanding required

to adopt more mathematical and logical approach to software development Until education takes these failings seriously formal methods will be an obscure byway in software engineering which in turn will remain severely impoverished as a result

Bowen, Andreas Fett, Michael G. Hinchey, 1998-09-16 1 In a number of recent presentations most notably at FME 96 one of the foremost scientists in the field of formal methods C A R Hoare has highlighted the fact that formal methods are not the only technique for producing reliable software This seems to have caused some controversy not least amongst formal methods practitioners How can one of the founding fathers of formal methods seemingly denounce the field of research after over a quarter of a century of support This is a question that has been posed recently by some formal methods skeptics However Prof Hoare has not abandoned formal methods He is reiterating 2 albeit more radically his 1987 view that more than one tool and notation will be required in the practical industrial development of large scale complex computer systems and not all of these tools and notations will be or even need be formal in nature Formal methods are not a solution but rather one of a selection of techniques that have proven to be useful in the development of reliable complex systems and to result in hardware and software systems that can be produced on time and within a budget while satisfying the stated requirements After almost three decades the time has come to view formal methods in the context of overall industrial scale system development and their relationship to other techniques and methods We should no longer consider the issue of whether we are pro formal or anti formal but rather the degree of formality if any that we need to support in system development This is a goal of ZUM 98 the 11th International Conference of Z Users held for the first time within continental Europe in the city of Berlin Germany **Proof in VDM: Case Studies** Juan C. Bicarregui, 2012-12-06 Not so many years ago it would have been difficult to find more than a handful of examples of the use of formal methods in industry Today however the industrial application of formal methods is becoming increasingly common in a variety of application areas particularly those with a safety security or financially critical aspects Furthermore in situations where a particularly high level of assurance is required formal proof is broadly accepted as being of value Perhaps the major benefit of formalisation is that it enables formal symbolic manipulation of elements of a design and hence can provide developers with a variety of analyses which facilitate the detection of faults Proof is just one of these possible formal activities others such as test case generation and animation have also been shown to be effective bug finders Proof can be used for both validation and verification Validation of a specification can be achieved by proving formal statements conjectured about the required behaviours of the system Verification of the correctness of successive designs can be achieved by proof of a prescribed set of proof obligations generated from the specifications
