The Oxford Handbook of Food Ethics Anne Barnhill, Mark Budolfson, Tyler Doggett, 2018 *Academic food ethics* incorporates work from philosophy but also anthropology, economics, the environmental sciences, and other natural sciences, geography, law, and sociology. Scholars from these fields have been producing work for decades on the food system and on ethical, social, and policy issues connected to the food system. Yet in the last several years, there has been a notable increase in philosophical work on these issues, work that draws on multiple literatures within practical ethics, normative ethics, and political philosophy. This handbook provides a sample of that philosophical work across multiple areas of food ethics: conventional agriculture and alternatives to it, animals, consumption, food justice, food politics, food workers, and food and identity.

Animal Ethics: The Basics Tony Miligan, 2015-06-05 *Animal Ethics* has long been a highly contested area with debates driven by unease about various forms of animal harm, from the use of animals in scientific research to the farming of animals for consumption. *Animal Ethics The Basics* is an essential introduction to the key considerations surrounding the ethical treatment of animals. Taking a thematic approach, it outlines the current arguments from animal agency to the emergence of the political turn. This book explores such questions as: Can animals think and do they suffer? What do we mean by speciesism? Are humans special? Can animals be political or moral agents? Is animal rights protest ethical? Including outlines of the key arguments, suggestions for further reading, and a glossary of key terms, this book is an essential read for philosophy students and readers approaching the contested field of Animal Ethics for the first time.
