

Ford Value Chain Analysis

Support Activities

The firm infrastructure denotes number of activities, such as- quality management, accounting, financing, planning and strategic management. This can allow Ford Motor Company to optimise the value of the whole value chain.

Human resource management has been analysed by Ford Motor Company through evaluation of different HR aspects such as recruiting, selecting, training, rewarding, performance management and other personnel management activities.

The technological integration in production and human resource activities requires Ford Motor Company to realise the value of technology development. It can be divided into process and product technological development activities.

The procurement in value chain is the process that helps a company find the necessary inputs to produce the desired product. For instance, for Ford Motor Company to produce the desired model, Ford Motor Company has to search for the required inputs like raw materials, parts, etc.

Primary Activities

Developing Strong Relationships
with suppliers

Focus on testing, packing, machining and equipment repair

Advanced Product Quality Planning D. H. Stamatis, 2018-11-12 This book defines and examines the foundations of the APQP Advanced Product Quality Planning methodology. It explains in detail the five phases and relates its significance to national, international, and customer specific standards. It also includes additional information on the PPAP Production Part Approval Process, Risk, Warranty, GD T Geometric Dimensioning and Tolerancing, and the role of leadership as they apply to the continual improvement process of any organization. Features: Defines and explains the five stages of APQP in detail; Identifies and zeroes in on the critical steps of the APQP methodology; Covers the issue of risk as it is defined in the ISO 9001, IATF 16949, the pending VDA, and the OEM requirements; Presents the role of leadership and management in the APQP methodology; Summarizes all of the change requirements of the IATF standard. *Total Materials Management*

Eugene L. Magad, 2013-03-09 Materials management has become an important activity in both manufacturing and service organizations. Rapid changes in the industrial environment such as the introduction of automation and Just In Time and demands for increased productivity and quality have increased the need for all personnel to be concerned with total control of materials. Clearly, this trend will continue and materials management will play an increasingly vital role in organizational success, especially for operations that are becoming automated. Materials management will be more critical in many service organizations where the materials group has received little attention in the past. This book covers the basic materials management function and provides valuable insights into various other major functions related to it. We believe that each of these manufacturing, marketing, finance, quality assurance, and engineering is vitally involved in materials management and any coverage of the subject that excludes these functions offers too narrow a perspective. With increasing demand for materials, managers' human resource requirements will be satisfied by individuals trained within the discipline and by personnel who have worked in other fields. The dimensions of materials management have grown so rapidly that many practicing managers are not aware that they are fulfilling material management functions. It is important that all individuals have the basic knowledge required to perform their roles in these organizations. *Six Sigma and Beyond* D.H.

Stamatis, 2002-11-12 The final volume of this series presents a synopsis of the curriculum that a typical Six Sigma program should follow. It differs from the preceding six volumes in that it is an implementation volume; therefore, the information is geared towards helping readers formalize their own training. The book establishes the minimum requirements for the Six Sigma
