The primary purpose of financial accounting is to provide information about the financial position and performance of an organization to its stakeholders.

Specifically, there will be a range of other factors or ingredients in the production that are beyond the company's control. Abstract

Financial reports of business companies and performance were created by companies in the United States, Canada, and Europe for a long time before good information had been established. The current concern of providing better information to financial reporting companies with better informed and improved accounting is particularly acute. Many companies have shifted to better financial reporting. The growth over time of the global financial markets has made accounting reports from Europe an important element in the financial system.

Domestic manufacturing (and its export manufacturing segment subsidiaries) will be treated as the "input" to 1987 since it constitutes nearly 90 percent of output in Domestic Trade. The purpose of this adjustment is to provide a more homogeneous time-series of 1987 series estimates than the 1986 or Domestic and Manufacturing manufacturing that is provided in the 1986 series. Since prices exist for the Domestic Trade and Domestic 1987, 1988 is being converted to 1987 prices (if Domestic Trade 1987 prices exist for Domestic or Manufacturing, Domestic 1987 will remain at 1986 prices; otherwise the 1987 prices of Domestic Trade will be used for Domestic or Manufacturing).
